2. This planning document, developed in accordance with the referenced regulation, describes the Army Materiel Command (AMC) Manufacturing Methods and Technology (MMT) Program for the period FY 84-88. This plan was completed by amending the 1983 Program Plan to take into account both programming actions which have occurred over the past year (i.e., FY 84 approvals, FY 85 apportionment submission, and FY 86 budget submission) and other command inputs reflecting FY 87 and 88 thrusts.
3. Because of the dynamic nature of military material requirements and the constant change in technology, the inclusion of a project in this plan is not a guarantee of funding. However, the plan does indicate the current technology needs and interests of the AMC community.

FOREWORD

This document presents information for the AMC Manufacturing Methods and Technology (MMT) Program for Fiscal Years 1984-1988. The projects and funding levels for the out-years are for planning purposes only and will change based on technological developments and revisions in program requirements. Since total funding for these planned projects exceeds the projected funds for the Army's MMT Program, some projects will not be funded or may be slipped to later fiscal years. HQ, AMC and its sub-commands and centers have the authority to reprogram funds to projects with higher priority, thereby affording the flexibility to accommodate new opportunities as they arise.

I. INTRODUCTION

The MMT Program Plan

The MMT Program Plan, CY 1984, provides within a single source a summary of current and near-term efforts included in the Army Materiel Command (AMC) MMT Program. Since weapons systems requirements and the technology for these systems are constantly changing, inclusion in the Program Plan is not a guarantee that an individual project will be funded. However, the Plan does serve as an indicator of the areas towards which AMC's resources will be directed and the magnitude of the Army's commitment to this program.

Organization of the MMT Program Plan

This document contains a "Command Plan" for each AMC major subordinate command or other AMC activity that sponsors MMT projects during the fiscal years 1984-88 (FY 84-88). Each plan is introduced by a command summary that describes organizational responsibilities and major areas of technological endeavor. Following this summary is a list of all projects under the command's sponsorship. Projects are grouped according to broad "Categories" and then arranged into subgroups by "Components." The category/component descriptors are product related although a few describe manufacturing processes. Individual projects are identified by the four digit project number and title. Project information includes: a brief description of the manufacturing problem addressed by the project; the proposed solution; and, the proposed funding requirements.

In December 1983, questionnaires were distributed to the 600 industry recipients of the 1983 MMT Program Plan. This endeavor to solicit a frank reaction to the Plan had dual purposes. First, it measured the general effectiveness of the 1983 edition. Second, it identified industry's requirements for information. Over 200 questionnaires were returned and most of them contained suggestions for improving the Plan. The response prompted a reorganization of this year's edition and the expansion of the "Industry Guide." The industry feedback was appreciated. The criticisms were constructive in nature; and, many laudatory remarks indicated the Plan's value to potential contractors.

The MMT Program

The Manufacturing Methods and Technology (MMT) Program serves the US Army Materiel Command as a bridge between research and development and production. The program's primary aim is to reduce the cost of weapons system acquisition by improving the efficiency of manufacturing processes and by implementing new technology. Although cost reduction is a primary concern, the emphasis is also directed toward efforts reducing air and water pollution, increasing safety, conserving energy, reducing dependency on critical material, improving producibility and increasing productivity.

Need for MMT

The MMT Program is a major DOD tool for improving productivity and reducing end product and spare parts costs. Although the United States still leads in productivity, countries such as Japan and West Germany are rapidly closing the gap. With the real dollars available for defense production shrinking, the Army must achieve productivity growth to get more for each dollar invested. The following excerpts illustrate the emphasis being given to the MMT Program.

Excerpt from the "Report of the Secretary of Defense Caspar W. Weinberger to the Congress," dated 1 February 1984:

"The Manufacturing Technology Program is a broad-based program to improve the productivity and responsiveness of the defense industrial base by investing in advanced technologies for the production of DOD materiel. This program has been in existence for over 20 years, and we intend to continue to give it priority attention because of its demonstrated high-payoff record and its ability to improve industrial productivity on a broad national basis."

Excerpt from "The FY 85 Department of Defense Program for Research, Development and Acquisition" by Richard D. DeLauer, Under Secretary of Defense for Research and Engineering to the 98th Congress, Second Session, 1984:

"This program will continue to receive priority attention because of its demonstrated high-payoff record in establishing new "factory floor" manufacturing processes which reduce lead times and their attendant costs and improve productivity on a very broad national base. Recent accomplishments include: (a) a new process to manufacture high purity Gallium Arsenide material used in integrated circuits in guidance control systems for several missile systems. Actual savings to date are \$4.8 Million after an investment of \$528 Thousand. Additional savings are expected to be another \$6.6 Million; (b) a new process of electronically inspecting aircraft fastener holes is ten times faster than manual methods and is expected to provide \$20 Million in savings on the C-5 wing modification alone."

Excerpts from a statement by Ms. Mary Ann Gilleece, Deputy Under Secretary of Defense for Acquisition Management, Office of the Under Secretary of Defense for Research and Engineering before the Subcommittee on Seapower and Strategic and Critical Materials of the Committee on Armed Services, House of Representatives, 8 March 1984:

"...MANTECH projects are expected to result in a first case, "factory floor" application of productivity enhancing technologies. The investments are viewed as "seed money" necessary to reduce the technical and fiscal risk of follow-on implementation. They actually demonstrate that the technology is effective and should be considered by others throughout the industrial base. Investments which simply result in a report which may or may not be used are discouraged. This strategy has paid off over the years. Estimates of MANTECH payoff vary from 3:1 to 5:1 depending on the basis of the estimate.

"Most MANTECH projects are executed by the private sector. The exceptions occur mainly in such areas as ammunition or large caliber weapons where the DOD owns the industrial base....

"MANTECH has been predominantly funded from 12 separate procurement accounts for about 20 years. However, during the review of the FY 84 budget, the Congress provided guidance that the program should be funded from RDT&E appropriation. DOD disagreed with this view because MANTECH investments provide technology which is used on the "factory floor" and therefore, ultimately supports the procurement budget. There is no doubt in our minds that the individuals and organizations in DOD's production infrastructure are best able to identify, justify and manage MANTECH investments. They know where and how industrial productivity can and should be improved. We believe it is logically inconsistent to require them to use RDT&E funds and RDT&E administrative procedures to spend those funds for MANTECH investments when the rest of our industrial base investments are funded from the procurement appropriations."

While the program continues to receive strong support from top executives within DOD, recent actions by Congress have not been so favorable. The Army's FY 83 MMT budget request for procurement funding was deleted by the House Committee on Appropriations. The Army program was administratively transferred to the RDT&E appropriation where about half of the FY 83 money, \$50 million, was eventually restored. The Navy and Air Force were not affected. A year later, Army again included most of its FY 84 request in the procurement budget; and, once again the committee rejected this approach. As a result, Army's FY 84 MMT Program as well as those sponsored by the other Services were funded from RDT&E. The FY 85 budget requests from all Services were submitted in the RDT&E appropriations to avoid the risk of losing the program entirely. It appears that future programs will continue to be a part of RDT&E. The House committee did grant special protection to FY 84 MMT funds so they could not be used for other purposes. The committee declared the MMT Program to be "of special interest" and no appropriated funds may be reprogrammed without prior approval.

The money saving and productivity enhancing aspects of the MMT Program have been under Congressional scrutiny for years. Congress' General Accounting Office (GAO) in its most recent audit, observes that DOD has taken positive steps toward improving its management of the program; however, only a limited number of these improvements have been fully achieved. They point to the imprecise methods used in accounting for financial benefits as a major weakness. They concluded that the three Services continue to have trouble assuring the implementation of successful projects into contractor and government facilities. In addition, well documented cost savings for implemented projects have been difficult to obtain. This difficulty is most apparent when the implementing facility has not been contractually required to report productivity and cost differences brought about by the new manufacturing method. Although the Army has developed a program control automated information system which includes a module to track and document the results of implementation, the House committee expects the establishment of well defined, uniform, tri-Service systems to manage the program.

II. PLANNED FUNDING

MMT Summary

Expenditures planned by the AMC Major Subordinate Commands approach \$486 million during the five year period. Starting at approximately \$73 million in FY 84, the planned annual funding level more than doubles at the end of the period.

The Army MMT Program is controlled by a standard accounting system which contains five different appropriations. In some cases, several of the commands share an appropriation. For example, the Weapons and Tracked Vehicles appropriation is used by three commands: AMCCOM, DESCOM, AND TACOM. The distribution of the appropriations among commands is shown on the following table. The level of planned expenditures within each appropriation is illustrated by the second table. The series of bar charts illustrate the tabular funding data graphically. These charts also compare the planned expenditures with the funding limits prescribed for the AMC "summer reviews" of the RDT&E Budget estimates and Apportionment requests.

Military Adaptation of Commercial Items (MACI)

The MACI Program encompasses those projects that explore the feasibility of adapting commercially available products to meet Army requirements. These products could be used as replacements for standard items in the Army inventory. Or, they might be used to meet either new or increased performance requirements.

A MACI project is a cost saving alternative to an Army sponsored developmental program. With MACI, the Army searches the commercial market for nondevelopmental end items or components which might meet requirements. These items have built-in advantages: RDT&E has been done independently by the manufacturer and an operational history is usually available.

A sample item is purchased and evaluated. The evaluation typically includes minor engineering modifications and testing of the item which leads to the preparation of performance specifications. At this point, the MACI project draws to a close and procurement of the item, in quantity, begins.

In recent years, the MACI Program has provided standardized technical parameters and tests to guide the acquisition of less costly commercial hydraulic systems and replacement components. It has also evaluated an amphibious system capable of delivering 30 tons of cargo over land, water, surf and marshland at speeds up to 60 mph. The system currently being analyzed is called the Lighter Air Cushion Vehicle (LACV-30).

The approximate dollar sizes of the past, current and planned annual budgets are listed below:

<u>Fiscal Year</u>	<u>Dollars (Millions)</u>
1982	17.1
1983	9.0
1984	10.0
1985	11.8
1986	12.2
1987	12.1

MACI projects, like MMT projects, are funded by the RDT&E appropriations. The Tank-Automotive Command (TACOM) and the Troop Support Command (TROSCOM) are AMC's most active sponsors of MACI projects. TACOM's evaluations focus on the commercial vehicle market while those of TROSCOM are in the areas of commercial generators, construction equipment and climate control systems.

<u>FISCAL REVIEW CYCLE</u>	<u>NUMBER OF PROJECTS</u>	<u>Percent of Projects Previously Planned and Published in the:</u>		
		<u>1981 PLAN (FY 81-85)</u>	<u>1982 PLAN (FY 82-86)</u>	<u>1983 PLAN (FY 83-87)</u>
FY 85 APPORTIONMENT	143	34.3	58.0	81.8
FY 86 BUDGET	319	----	31.7	50.5

This table shows the number of projects that currently remain in each of the two most recent fiscal review cycles. It also shows the percentage of those projects that appeared in previous editions of the MMT Program Plan. This illustrates the improved planning accuracy that naturally occurs as the planning process and the budgeting process converge.

III. NEW WEAPON SYSTEMS

Today, the United States has the finest technological capability and one of the highest industrial capacities in the world. The MMT Program serves to preserve and enhance the productivity and readiness of the defense production facilities, sources for weapons systems, components, and repair services. These weapons will modernize the forces by performing a variety of combat missions, from the nation's command center to the front line of battle. Selected systems that illustrate the direction and importance of our equipment modernization programs follow:

The Abrams tank and the Bradley fighting vehicle are new systems that the Army is procuring to improve the combat effectiveness of the forces which may be challenged by Soviet T-64 and T-72 tanks and BMP fighting vehicles. The speed, mobility and shoot-on-the-move capability of the Abrams tank have added a new dimension to combat capabilities. Because a mix of armor and infantry forces is necessary for mutual support on the modern battlefield, the Bradley fighting vehicle has been developed. This system provides the cross-country mobility and armor protection necessary to keep pace with the Abrams tank. The Bradley fighting vehicle's 25-millimeter cannon can defeat Soviet armored infantry fighting vehicles at battlefield ranges. With the TOW (tube-launched, optically-tracked, wire-guided) system, the Bradley crews can defeat modern Soviet tanks at long ranges.

New and improved weapons systems will bring about a synergistic effect on the battlefield. The Abrams tank and BFV complement each other and are a highly effective team. The M9 Armored Combat Earthmover, a vehicle designed specifically for our combat engineers, further increases the combat effectiveness of tanks, fighting vehicles, and other systems on the modern battlefield. In the hands of the engineers, the M9 is used to prepare fighting positions for all types of equipment and units, and is also employed to create obstacles when and where needed. Additionally, it has the speed and mobility to keep pace with combat forces and it provides its crew with armor and chemical agent protection to improve survivability on the lethal battlefield of today and tomorrow. A multi-year, competitive procurement contract for nearly 1,400 vehicles is planned.

Another major component in the combat arsenal, which complements the capabilities of ground forces, is the attack helicopter. This weapon plays a major role in any situation which requires a rapid response to an enemy threat or an opportunity to exploit a developing tactical advantage. The AH-1 Cobra helicopter, a proven system, is being upgraded to enhance its survivability on the modern battlefield. The Cobra however, is essentially a daylight aircraft with limited performance capabilities in some altitudes and climates. These limitations make it less than optimal for the many environments in which the Army may be called upon to fight.

In addition to upgrading the Cobra attack helicopter, procurement of the new Apache attack helicopter is continuing. The Apache's agility enables its crew to take maximum advantage of the environment to avoid detection. A target-acquisition-and-designation sight and a night-vision sensor enable the Apache to attack regardless of visibility restrictions. The Hellfire missile, with which the Apache will be equipped, is a laser-guided missile capable of delivering both direct and indirect fire. Hellfire is faster, has greater range, and is more lethal than the TOW missile. Armed with the Hellfire missile and a 30-millimeter chain gun, the Apache brings an awesome combination of lethality and versatility to the modern battlefield. The Apache attack helicopter procurement program is in its third year.

Our land forces must be able to shoot deep into the enemy's rear areas with great accuracy and massive firepower, while simultaneously striking enemy targets which are engaging our front-line units. Procurement of artillery systems will continue to provide indirect fire support for committed land forces. This procurement is not limited to firing systems but also includes target acquisition and fire control systems.

The Army's longest range weapon is Pershing II, a solid-fueled, two stage, ballistic missile designed to strike high-threat, time-sensitive enemy targets. Its sophisticated radar terminal guidance system, which automatically makes in-flight corrections, will result in pinpoint accuracy and permits use of smaller nuclear warheads than were required with older, less efficient systems. Truck-mounted and highly mobile, the Pershing II will be a survivable and powerful addition to deterrent posture and fighting capability.

For direct support of our front line forces, the Army is procuring the Multiple Launch Rocket System (MLRS). A free-flight, area fire weapon system, the MLRS will fill a void in current indirect fire capability. Designed to suppress enemy defenses and provide artillery counter-fire, the MLRS delivers large volumes of munitions against time-sensitive targets in a minimum amount of time. MLRS was developed in cooperation with the United Kingdom, France, Italy, and Germany. This joint program is achieving cost effectiveness while enhancing modernization and near-term combat readiness of the NATO forces through procurement of common systems. Acquisition of the MLRS remains on schedule with a proposed total program acquisition systems cost projected to be below the original 1978 planning estimate.

The Battery Computer System (BCS) increases the speed and accuracy with which artillery fire can be delivered on target, and procurement of this system is proceeding under the terms of a multi-year contract. The Ground Laser Locator Designator which enables first round fire-for-effect on targets with both conventional and precision guided munitions is being distributed to European combat units.

Tactical nuclear weapons, a major force-multiplier in deterrence and warfighting capabilities, need modernization. Weapons incorporating technology which is more than 20-years old must be replaced to assure reliability and effectiveness. Programs for theater nuclear force modernization include continued procurement of the 8-inch nuclear artillery projectile as well as development of a new 155-millimeter nuclear projectile. These programs will continue to provide a credible theater nuclear force.

Survival on the battlefield of the future will require extensive protection against chemical weapons. Efforts will continue to develop improved chemical defense material and to reduce the significant degradation of military performance in a chemical warfare environment. Long-term research and development programs are required to develop follow-on protective systems for armored vehicles, new protective masks, secure command and control facilities, and rest areas for soldiers. Additionally, more reliable and advanced chemical detectors are needed as well as improved methods of decontamination.

Interdiction of high-value second echelon targets is of great concern. To facilitate accomplishment of this interdiction mission, the Army is developing a combination of mutually supporting sensor and computer based display devices which can detect and classify movement of personnel and wheeled and tracked vehicles at ranges up to 100 kilometers. The Remotely Monitored Battlefield Sensor System (REMBASS), with the use of data relays, will provide targeting data at extended ranges so that enemy formations can be engaged before they reach the front-line battle area.

The Army of the future requires for its survival the capability to detect and locate ground-moving targets, command posts, assembly areas, and low-flying helicopters and fixed-wing aircraft. In conjunction with the Air Force, the Army is developing the Joint Surveillance and Target Attack Radar System (JOINT STARS), which is based on a merger of technology developed for the Army Battlefield Data System and the Air Force PAVE MOVER program. A primary advantage of the system will be the simultaneous broadcast of intelligence data to multiple ground stations throughout the battle area.

The Army's future reconnaissance and target acquisition capability will be enhanced by the remotely piloted vehicle (RPV). Because a potential enemy's air defense capability could make manned flights penetrating into his rear area risky, an RPV with low-light television and a forward-looking infrared night vision sensor is the ideal platform for providing real time information on front line and second echelon enemy troop dispositions. The RPV also will have the capability to adjust artillery fire and designate targets for laser-terminated precision-guided munitions.

Another area which has great potential for future development is that of artificial intelligence and robotics. Five primary areas employing this relatively undeveloped technology are being explored. The thrust of this research is to develop nearly autonomous robot operation of vehicles or equipment for ground reconnaissance, ammunition loading, information interpretation, training and maintenance, and medical diagnostics. Robots will possess extremely sophisticated decision-making microelectronic software. While some minimal human control will be required, the potential for human and cost savings as a result of this technology is enormous. Robot manned weapons systems which would have the capability to "recognize" and engage an enemy without direct and immediate human support represents just one possible application of this new technology.

While the Army's materiel acquisition philosophy recognizes the importance of improving fielded systems whenever feasible, it also recognizes that the potential for improvement of a given system is limited. Air defense systems illustrate this situation.

On the battlefields of today and tomorrow, Soviet fixed and rotary wing aircraft present a significant threat to our land forces. Some of our current air defense systems were not designed to function in today's electronic countermeasures environment, nor are they capable of multiple target track and engagement. The technology that provides these capabilities today did not exist 20 years ago. Patriot, the SGT York division air defense (DIVAD) gun, and Stinger--products of more modern technology--are ready to fill the gaps where older systems are inadequate and where the potential for product improvement has been exhausted.

The Patriot is the Army's new all-weather, long-range, surface-to-air missile system. This weapon can simultaneously attack and destroy several enemy aircraft while tracking scores more. Capable of operating under intense electronic jamming conditions which will characterize the battlefield of the future, the Patriot has sophisticated radar guidance features and a proximity fuzed warhead. In comparison with the systems it is replacing, Patriot has greater reliability and achieves a dramatic increase in operational effectiveness.

An important system in the air defense family of weapons is the Improved Hawk (IHAWK) missile which provides large area coverage for air bases and facilities in NATO's rear areas. Improved spare parts availability and the Army's program to apply product improvements to this already developed and proven system will assure its effectiveness against the evolving threat well into the 1990s.

The self-propelled Chaparral, the Army's short-range air defense missile system, was first fielded in 1969. It will remain in the Active Army inventory through the 1990s and is being provided to Reserve Components. A towed version, which enhances strategic mobility, is being developed for light forces. Chaparral has already undergone significant modifications to maintain its effectiveness, and further development will provide increased engagement range while reducing its vulnerability to enemy countermeasures.

Complementing the capabilities of the Chaparral is the 40-millimeter SGT York DIVAD gun. This system provides our heavy divisions with a modern anti-aircraft weapon which can maneuver with front line units and engage sophisticated aircraft. The SGT York is a survivable, radar-controlled system, which is capable of defeating high-performance aircraft as well as the Soviet HIND attack helicopter.

Fielding of the Stinger air defense missile, the Army's first new manportable air defense system since the late 1960s, adds a significant capability to the land forces. Development of a second generation of this missile with an improved guidance system designed to overcome enemy countermeasures has been completed. Called Stinger-POST (passive optical seeker technique), this improved weapon has entered production.

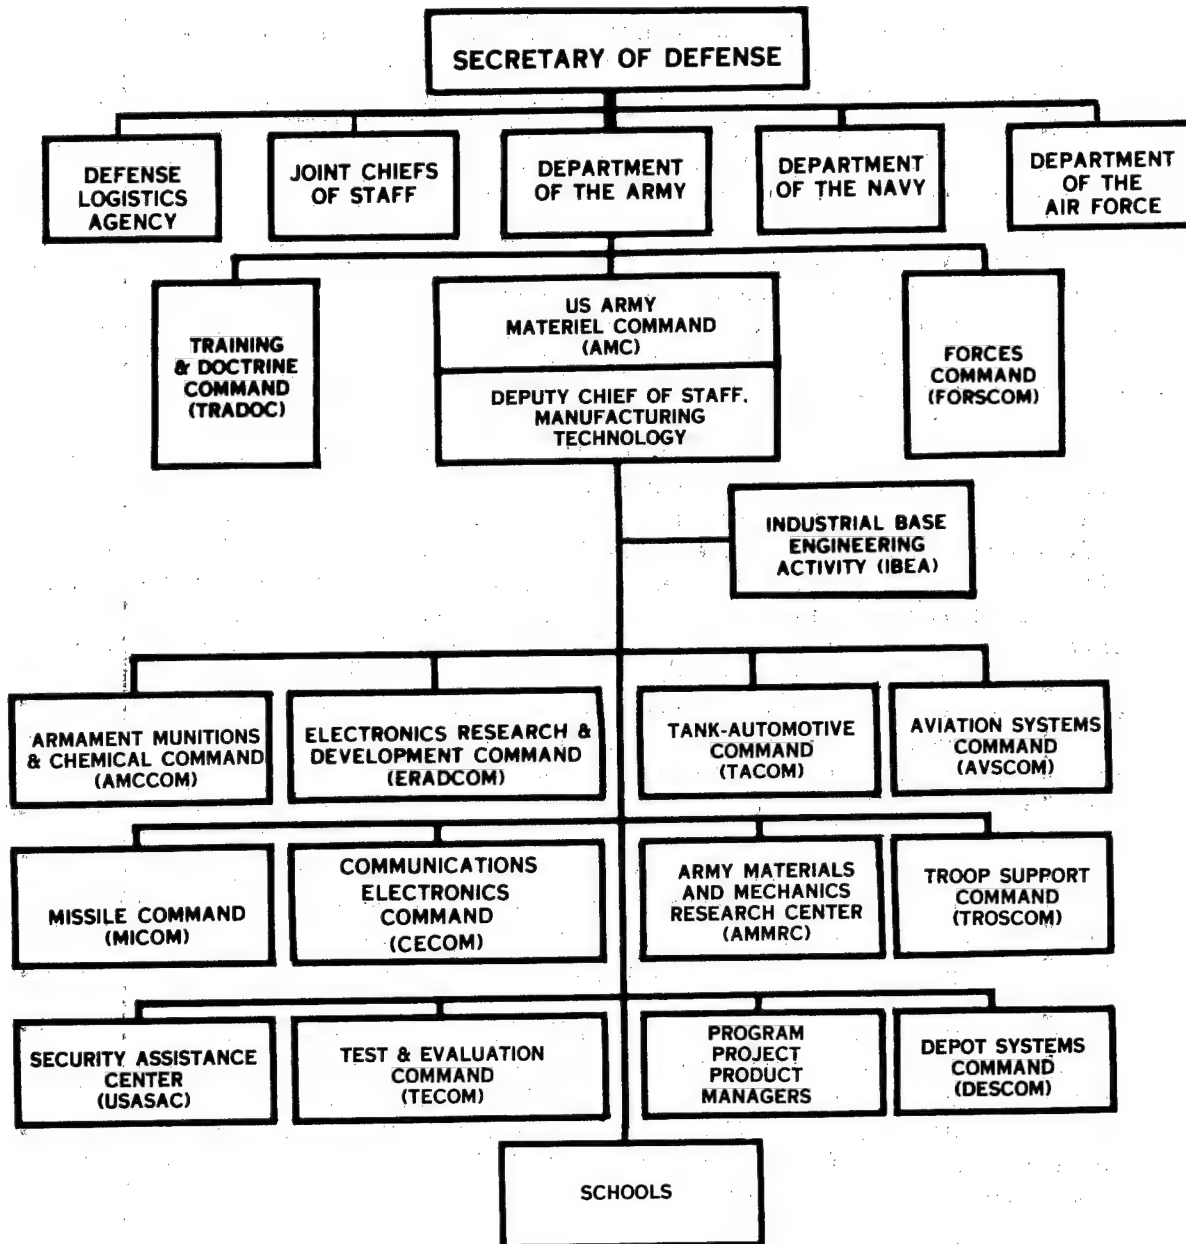

Long-term economies can be achieved by the Army through development and acquisition of battlefield simulators. Interest and investment in training simulators is increasing. Simulators conserve fuel, ammunition and space. They also reduce wear and tear on weapons and equipment and generally decrease training and operating costs. Further, simulators offer training that cannot be duplicated because of safety and cost limitations. Malfunctions can be simulated, events frozen and procedures demonstrated until competence is developed. In FY 84, the Army will procure a variety of simulators to enhance our overall training and readiness.

IV. INDUSTRY GUIDE

This section explains how projects are selected for the Plan, how they are developed and submitted for funding and how contracts are awarded to industry.

The objective of the MMT Program is to develop new manufacturing methods and processes that will reduce the cost of weapons systems production. Within the AMC, the Deputy Chief of Staff for Manufacturing Technology is the office established and charged with overall program responsibility. The functional responsibility is assigned to the commodity oriented, major commands that are subordinate to AMC. These Major Subordinate Commands (SUBMACOMs) plan, formulate, budget, and execute individual projects. The Industrial Base Engineering Activity (IBEA) assists AMC on the technical aspects of the program. The chart on the next page depicts the hierarchical relationship of these organizations.

UNITED STATES ARMY MATERIEL COMMAND (AMC)

Identification of manufacturing problems is the first step in developing an annual program. Problem areas are conceptualized by the SUBMACOMs and sent to IBEA for the compilation of a five-year planning document (the Program Plan). At the date of publication, the 1984 Program Plan, for example, contains one funded year (FY 84), two programmed years (FY 85-86), and two planned years (FY 87-88).

As the program cycle proceeds, out-year plans are refined and project proposals are prepared and submitted for evaluation during the budget review phase. These proposals are documented in what is known as a P-16. A P-16 is simply a format used to document estimated project cost, economic justifications, and a description of work. The budget submission represents the first bid for inclusion in the program.

Industry has the opportunity to participate in the technical evaluation of the budget program during the annual Manufacturing Technology Advisory Group (MTAG) conference. The MTAG conferees can also discuss the out-year concepts contained in the Program Plan and suggest technical adjustments to the current program.

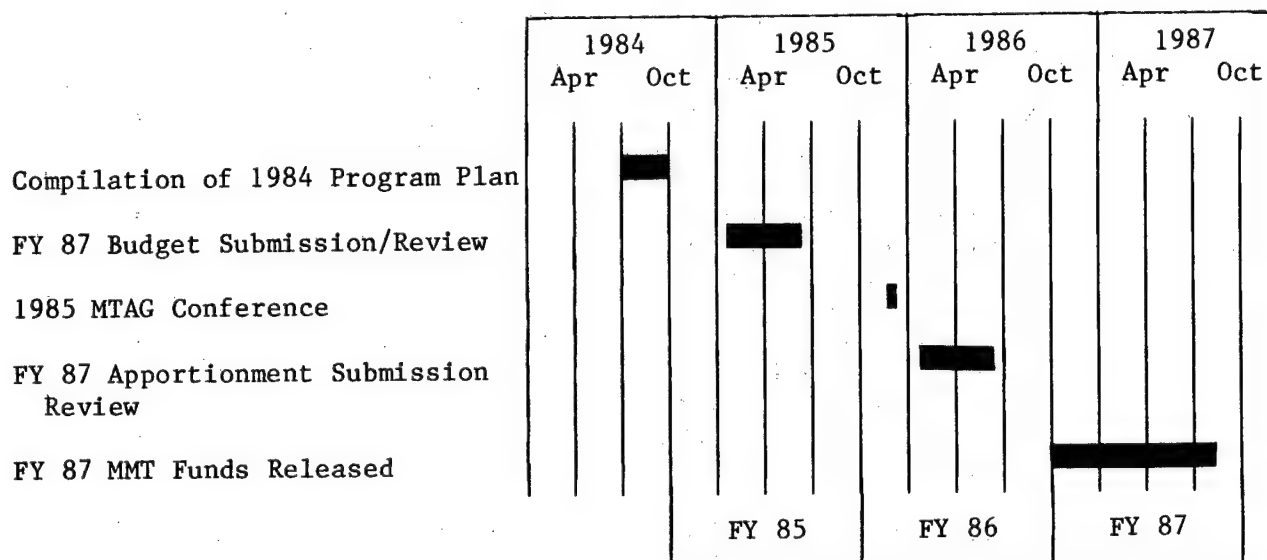

The budget submission is followed about twelve months later by a second, and more definite, submission which involves another evaluation leading to the apportionment of available funds. Criteria for funding individual projects include technical, operational, and economic feasibility. Evaluation includes the potentials for technical success, implementation of results, and return on investment. The interrelationships between these factors are also considered. Approximately 300 projects enter the budget review phase each year and about 170 of them are funded when the new fiscal year begins. Although this is the normal cycle, a project can enter it at any point in time. Such a project is known as a late start submission and funding is usually granted at the expense of another project.

A calendar depicting the program cycle is shown on the next page. The federal Government budgets and spends on a fiscal year basis. The fiscal year starts on the first of October and ends on the following thirtieth of September. For example, FY 85 begins on 1 October 1984.

Throughout the Program Plan reference is made to various appropriations. These appropriations are established by the US Congress as a standard accounting system. Most MMT efforts are funded through the Research, Development, Test and Evaluation (RDTE) Appropriations which include (1) Aircraft, (2) Missiles, (3) Weapons and Tracked Vehicles, (4) Ammunition, and (5) Other.

A substantial portion of the annual program is placed on contract. In recent years, about 60 percent of the funding has been awarded to the private sector. Much emphasis is placed on free competition for MMT contracts, with equal opportunity given to all interested, qualified business firms.

YEARLY ACTIVITIES

Services and materiel are acquired from industry by two basic methods - formal advertising and negotiation.

Congress has established formal advertising as the preferred method of contracting for military supplies and services. The Army derives price and other benefits that result from a full and free competition for contracts. Formal advertising also provides all bidders with an equal opportunity to develop and submit bids based on the same set of Army specifications. Procedures are prescribed by law and are detailed and rigidly written to assure equal treatment for all bidders.

The prerequisites for formal advertising are quite specific; and they are critical, because absence of any one of them will preclude successful use of the method. The prerequisites are as follows:

1. Army specifications must be complete, explicit, available to all potential bidders, and unrestricted because of security.
2. Two or more capable sources must be available to assure competition.
3. There must be enough time to conduct the procedures as prescribed. The Army must develop and assemble a complete statement of needs, terms, and conditions of contract into a proper Invitation for Bid. Bid invitations must be distributed; bids prepared and submitted by bidders, opened and evaluated by the Army, and a contract awarded. This process may span 60 to 120 days.

4. The Army must select the successful bidder on the basis of price alone, provided the bidder is otherwise qualified as responsive and responsible.

A variant procedure, closely approximating formal advertising, is referred to as "two-step formal advertising." This method is used when existing specifications are inadequate for use. Although not as preferable as formal advertising, "two-step formal" is clearly preferable to negotiation, and its use is required where the following prerequisites exist:

1. Specifications are not definitive. Technical discussions and evaluations must insure mutual understanding between Army and prospective contractors.
2. Definite criteria for evaluating proposals from prospective contractors exists.
3. More than one technically qualified source is expected to compete.
4. There must be enough time to conduct the two-step procedure; normally 100 to 150 days.
5. A "firm fixed price" or a "fixed price" contract will be used.

The first step of the process is initiated by the Army's request for technical proposals based upon performance specifications. These proposals are evaluated and discussed by both parties as necessary, but price is not a subject for these discussions. The Army then makes a determination as to the technical acceptability of the supplies or services offered and may summarily reject some outright, or make provisions for modification and acceptance of proposals that are marginal.

The second step of the procedure is conducted as a formally advertised procurement, except that advertising is limited to those who have submitted technically acceptable proposals during the first step. Each bidder must then bid on the basis of meeting the performance specification and providing the exact supply or service proposed by him and approved by the Army during the first step. Although products or services of the bidders may vary, award of contract is based on price alone.

Not all requirements can be obtained through the advertising processes. As a third alternative, acquisition by negotiation is permitted. The development of new systems or production of complex equipment, for example, demands much discussion, clarification, exploration, or modification of proposals between both parties. Under specific circumstances prescribed by Congress, negotiation is generally preferable when:

1. The item is critical or complex.
2. Delivery is urgent.
3. Few suppliers exist and competition is impractical.
4. Specifications are incomplete or unstable.
5. Emergency conditions exist.
6. The item required may demand a sizable investment by industry in fixed assets.
7. Security classification precludes advertising.
8. Total interchangeability of parts with existing supplies is absolutely necessary; no compromise is justified.
9. Industry experience is lacking. Responses to formal advertising will be replete with contingency costs.
10. The Army must deal with sole or limited sources.

The negotiation process resembles the purchasing process used in industry. Not all industry practices, however, are accepted in the negotiation process. For example, companies that buy from each other often develop long term understandings. In contrast, this relationship between the Army and a private company is not permitted.

Formal advertising is conducted in full public view with the bids of all firms known to all competitors prior to award of contract. This is not true in negotiation. Negotiation is a process closed to the public. Proposals submitted by a company are not disclosed and subsequent bargaining on the basis of these proposals are conducted individually. In this way, the spirit of competition is maintained among the few suppliers that may be participating. Only after the award of a contract is the successful company made known and the terms and conditions of the contract disclosed.

In recent years, more than one-half of all Department of Defense requirements have been purchased by "two-step" procedures and negotiation. Most MMT contracts have been reached through the same methods.

A business firm seeking to participate in the MMT Program should inform Army procurement offices of the capabilities it has to offer and request that the firm be placed on appropriate bidders' mailing lists. Copies of Standard Form 129, "Bidders Mailing List Application," are available at most federal agency procurement offices. A copy of this form is included in the publication "Selling to the Military." This

publication also contains a comprehensive list of procurement offices and it may be purchased from the Superintendent of Documents, US Government Printing Office, Washington, DC, 20402.

Each procurement office has unique supplemental instructions for the Bidders Mailing List Application; therefore, individual requests should be directed to each office. These instructions should be followed carefully to assure prompt processing. After a firm is placed on the list, it will receive all solicitations covering any requirements that could be met by its stated capabilities.

The "Commerce Business Daily," published by the Department of Commerce, is a valuable source of information to businessmen in identifying products and services which individual military procurement offices are currently buying. The publication also lists subcontract opportunities offered by Defense prime contractors, recent contract awards which could lead to imminent subcontract opportunities, surplus sales information, and other pertinent information on procurement actions. The "Daily" is available for inspection at each of the procurement offices; the field offices of the Small Business Administration, Department of Commerce, and General Services Administration; and, other cooperating offices, including many local chambers of commerce. It can also be purchased through subscription. To order, send \$175 for 1st class postal delivery or \$100 for 2nd class along with a full mailing address to the Superintendent of Documents, US Government Printing Office, Washington, DC, 20402. Credit card orders are accepted: telephone (202) 783-3238.

NOTE: Various government publications were used as sources for the preceding information.

V. PROCESS TECHNOLOGY INDEX

The projects fully described in the body of this document are grouped into "Categories" and "Components" which are end item type descriptors. This index lists all the projects, less Problem and Solution statements, and groups them by technical areas. The primary grouping of this index is by the primary Manufacturing Technology Advisory Group (MTAG) sub-committee designator (i.e., CAD/CAM, Electronics, Metals, Non-Metals, Munitions, and Test & Inspection). Within each MTAG group, projects are further grouped alphabetically by process.

VI. COMMAND PLANS

**ARMAMENT, MUNITIONS AND CHEMICAL COMMAND
(AMCCOM)**

US ARMY ARMAMENT, MUNITIONS AND CHEMICAL COMMAND (AMCCOM)

AMCCOM, with headquarters at Rock Island, IL, provides and performs life-cycle management over the accomplishment of total research, development, engineering, procurement, and materiel readiness functions for conventional and nuclear weapons; ammunition (artillery, infantry, gun type air defense, surface vehicle mounted and aircraft mounted); fire control systems; chemical warfare and chemical biological defensive systems/materiel; Ammunition Peculiar Equipment (APE); Test Measurement, and Diagnostic Equipment (TMDE); and tools and maintenance equipment.

AMCCOM is also the single manager for the procurement, production, supply, maintenance and transportation of conventional ammunition for the Department of Defense.

The AMCCOM complex includes the Headquarters, two research and development centers, three project managers, four arsenals, 30 ammunition plants and activities, Defense Ammunition Center and School, and various other field and support activities. The two research and development centers (Chemical and Armament) are located at Aberdeen Proving Ground, Maryland and Dover, New Jersey respectively. The Armament Research and Development Center includes the Large Caliber Weapon Systems Laboratory, the Fire Control and Small Caliber Weapon Systems Laboratory and the Ballistic Research Laboratory. These two research and development centers are responsible for research, design, development and life cycle engineering for assigned materiel. Rock Island Arsenal in Illinois is best known for the production and assembly of gun mounts, receivers and recoil mechanisms, and for its tool set assembly mission. Watervliet Arsenal has the unique mission of producing gun and cannon tubes for the Army, Navy and Marines. Pine Bluff Arsenal is responsible for defensive chemical munitions and equipment and is the only current site at which white phosphorous-filled items are loaded. Rocky Mountain Arsenal performs demilitarization of obsolete chemical agent identification sets.

The command is staffed by approximately 22,000 military and civilian personnel. Also, 18,000 persons are employed by contractors at AMCCOM plants.

AMMUNITION PROGRAM

Bridging the technology gap, particularly in those areas that have no civilian counterpart, is a challenging task for the Ammunition MMT Program. In many respects, the Ammunition program presents unique problems which require innovative solutions. Current operations involve a great many hand operations, and methods must be found to efficiently mechanize these. Batch processes must be converted to continuous processes in order to take advantage of new materials handling techniques and to improve the safety of operations.

The primary objective of the Ammunition Manufacturing Technology Program is to improve existing manufacturing processes, techniques, and equipment. The second objective is to bridge the gap between development and full-scale production. The third objective is to solve technological problems identified in the program.

In response to the Warsaw Pact's formidable offensive capability to wage chemical warfare, our capability to produce chemical and biological defense systems are being upgraded. Improved manufacturing techniques are required for decontamination kits, chemical agent detection/warning systems and protective gear. The most sophisticated of these systems are first generation sensors which can detect the presence of toxic agents at remote distances. Hand fabrication methods used during initial development are unsuitable for quantity production. The MT program will develop new techniques for fabricating sterling cycle coolers, optics, interferometers and cryogenic detectors. These detection system components will be processed in pilot facilities where the new techniques can be evaluated prior to full-scale production.

High rate production is scheduled, late in the 1980s, for a new precision guided munition for the 8-inch howitzer. It is called sense and destroy armor (SADARM). The SADARM projectile is fuzeed to eject submunitions over the target area. While each submunition descends, its fuze detects the infrared signature of a target such as an armored vehicle. The fuze also selects the exact moment to fire the warhead which strikes and penetrates the relatively soft top of the target. SADARM fuze production will benefit from the automated manufacturing, assembly and testing techniques being developed for millimeter wave devices during this five-year period.

The Manufacturing Methods and Technology effort in the Load, Assemble and Pack area is guided by four major program goals; improved economy of operation, improved safety conditions for operating personnel, establishment of a rapid response production capability, and improvements in the quality of the end product produced. All of these goals must be accomplished within the standards and criteria established for pollution abatement and energy conservation.

PROBLEM - CURRENTLY, TOXIC SLUDGES ARE BEING STORED IN LAGOONS. DUE TO MORE STRINGENT FEDERAL AND STATE WATER POLLUTION AND SOLID WASTE DISPOSAL STANDARDS, THE NEED FOR A SATISFACTORY SLUDGE DISPOSAL METHOD FOR THE ARMY'S MUNITIONS PLANTS IS NEEDED.

SOLUTION - SELECTED COMMERCIALY AVAILABLE TREATMENT TECHNOLOGIES SUCH AS CHEMFIX, CHEM-CLEAN OR STABLEX PROMISE STABILIZATION OF SLUDGE BY SOLIDIFICATION AND/OR CHEMICAL FIXATION. IT IS PROPOSED TO INVESTIGATE AND ASSESS THESE PROCESSES FOR APPLICATION AT AAPs

COMPONENT -- PROPELLANTS/EXPLOSIVES

(4489) TITLE - ADVANCED POLLUTION ABATEMENT FOR DARCOM FACILITIES

1443 917

PROBLEM - MUCH WORK HAS BEEN DONE IN THE PROPELLANTS AND EXPLOSIVES PLANTS TO MEET THE POLLUTION ABATEMENT STANDARDS. HOWEVER, ALL OF THE GOALS HAVE NOT YET BEEN MET.

SOLUTION - DEVELOP TECHNOLOGY TO DISPOSE OF WASTEWATER TREATMENT SLUDGE, TO PROVIDE TERTIARY TREATMENT OF HAAP WASTEWATER, TO TREAT PINK WATER, AIR EMISSION AND DETONATOR WASTE, AND TO PROVIDE ENVIRONMENTAL IMPROVEMENTS FOR NITRATE ESTERS.

(4511) TITLE - DISPOSAL OF FINAL SLUDGE FROM ACID RECOVERY OPERATIONS

722 164 275 370 47

PROBLEM - SODIUM HYDROXIDE IS PRESENTLY USED TO NEUTRALIZE NITRIC ACID IN WEAK ACETIC ACID PRIOR TO ITS PRIMARY DISTILLATION AND IN THE FINAL SLUDGE TO KILL THE WASTE RDX. A BY PRODUCT OF THIS REACTION IS A LOW GRADE SODIUM NITRATE.

SOLUTION - TO DEV AN ALTERNATIVE MORE COST EFFECTIVE PROCESS F/ NEUTRALIZATION OF NITRIC ACID CAUSTICIZING + SLUDGE. AMMONIUM ACETATE IS A RECOMMENDED ALTERNATIVE. THE BY PROD IS AMMONIUM NITRATE, A MORE VALUABLE PROD THAN SODIUM NITRATE.

(4556) TITLE - ON-LINE MONITORS F/WATER POLLUTANTS GENERATED BY MFR CF EXPL 458

PROBLEM - AAPs DISCHARGES ARE HAZARDOUS, TOXIC AND UNIQUE TO THE MILITARY. THE LAW STIPULATES THAT ALL POLLUTANTS BE MONITORED. SPECIAL INSTRUMENTATION IS NECESSARY TO MONITOR MILITARY UNIQUE POLLUTANTS AT THE REQUIRED DETECTION LEVELS.

SOLUTION - EARLIER PRJCTS DEVELOPED AN ELECTROCHEMICAL, RAMAN AND POLAROGRAPHIC ANALYZERS. FIELD TEST AND EVALUATE THESE ANALYZERS FOR ON-LINE MONITORING USE. THOSE MEETING PERFORMANCE CRITERIA WILL BE MATED WITH ON-LINE SAMPLING AND FURTHER FIELD TESTED.

(4612) TITLE - NITRAMINE (LOVA) PROPELLANT WASTEWATERS ABATEMENT 250 250

PROBLEM - THE INGREDIENTS (RDX-TAGN) IN NITRAMINE PROPELLANTS WERE NOT CONSIDERED IN DEVELOPING CRITERIA FOR POLLUTION ABATEMENT AT GDCO FACILITIES. NOW NITRAMINE PROPELLANTS ARE SCHEDULED FOR PRODUCTION. EFFECT OF NITRAMINE ON POLLUTION ABATEMENT UNKNOWN.

SOLUTION - EVALUATE SELECTED TECHNOLOGIES FOR NITRAMINE ABATEMENT IN FY85 WHEN RESULTS OF CURRENT R+D PROGRAM EXAMINING THIS WILL BE FINISHED. OBTAIN DATA FOR PLANT IMPLEMENTATION.

(4651) TITLE - EXPLOSIVE RECLAMATION FACILITY 335 231

PROBLEM - EXISTING HI-PRESSURE WASHOUT FACILITY AT IOWA AAP HAS DEMONSTRATED REUSE AND RECIRCULATION OF PROCESS WATER. THE REMAINING PROBLEM INVOLVES WHAT TO DO WITH THE EXPLOSIVES THAT HAVE BEEN WASHED OUT.

SOLUTION - DESIGN, INSTALL AND DEMONSTRATE A PROTOTYPE RECLAMATION SYSTEM THAT CAN BE USED IN THE HI-PRESSURE WASHOUT FACILITY AT IOWA AAP.

(4689) TITLE - EAK EXPLOSIVE WASTEWATER TREATMENT 350 250

PROBLEM - EAK EXPLOSIVE IS UNDER DEVELOPMENT. PRODUCTION OF EAK IS EXPECTED TO EXCEED 10 MILLION LBS/YEAR. THE POTENTIAL SITES FOR MANUFACTURING EAK DO NOT HAVE TREATMENT FACILITIES FOR EXPLOSIVE CONTAMINATED WASTEWATERS.

SOLUTION - DEVELOP TREATMENT OF EAK EXPLOSIVE CONTAMINATED WASTEWATERS. A FY84 R+D PROJECT WILL CHARACTERIZE THIS WASTEWATER. AFTER STUDYING FEASIBLE TREATMENTS MAKE A PILOT PLANT TO EVALUATE THE MOST PROMISING ONES.

(4691) TITLE - DESTRUCT/REMLV OF EXPLOS FROM WASTENR USING SUPERCRT FLUID 275

PROBLEM - WASTEWATER FROM ARMY AAPs POSE A SERIOUS POLLUTION PROBLEM TO DRINKING WATER SUPPLIES AND AQUATIC/AMPHIBIAN LIFE IN RECREATIONAL WATERS. MORE STRINGENT ENVIRONMENTAL LAWS/REGULATORY STANDARDS MANDATE DEVELOPMENT OF NEW MORE COST EFFECTIVE TECHNOLOGY.

SOLUTION - USE SUPERCRTICAL(ABOVE 374 DEG C AND 220 ATMOSPHERES) FLUID TECHNOLOGY. IT CAUSES SOLUTION OF COMPLEX ORGANIC SUBSTANCES AND SUBSEQUENT DECOMPOSITION/REFORMATION INTO LOW MOLECULAR WEIGHT PRODUCTS. BOTH ORGANIC AND INORGANIC COMPOUNDS UNDERGO DESTRUCTN.

250

PROBLEM - CARBON IN CARBON ADSORPTION BECOMES CONTAMINATED WITH EXPLOSIVES AFTER OPERATING. IT MUST BE EITHER DISPOSED OF OR REGENERATED. OPEN BURNING WAS THE USUAL DISPOSAL METHOD BUT SOLNER OR LATER THIS WILL BE BANNED COMPLETELY.

SOLUTION - REGENERATE THE CARBON IN-SITU WITH SOME NEW PROMISING SOLVENTS. THIS WILL BE A VIABLE ALTERNATIVE TO STOCKPILING A HAZARDOUS WASTE (SPENT CARBON) CAUSED BY A BAN ON OPEN BURNING.

COMPONENT -- RECYCLE

(4579) TITLE - WHITE WATER POLLUTION ABATEMENT

SOLUTION - AUTOMATE THE GAGE + WEIGH PROCESS USING THE TECHNOLOGY DEVELOPED FOR 5.56MM. THE TECHNOLOGIES FOR THIS AUTOMATED PROCESS INCLUDE- OPTICS/ELECTRONICS, LASER SCATTERING, EDDY CURRENT, AND X-RAY. THE PROCESS WILL BE COMPUTER CONTROLLED.

COMPONENT -- GENERAL

(4145) TITLE - CONTROL DRYING IN AUTO SB AND BALL PROP MFG

300

PROBLEM - OFF-LINE ANALYSIS FOR MOISTURE AND VOLATILES MAKES IT DIFFICULT TO CONTROL A CONTINUOUS DRYING OPERATION SINCE THE TIME REQUIRED FOR ANALYSIS IS LONG COMPARED TO THE RESIDENCE TIME FOR THE PROPELLANT IN A CONTINUOUS DRYER.

SOLUTION - USE PRODUCT TEMPERATURE AND/OR ON-LINE ANALYZERS AND FLOW METERS AS A BASIS FOR IMPROVED CONTROL OF A CONTINUOUS DRYING OPERATION AND REDUCE THE AMOUNT OF OFF-LINE ANALYSIS REQUIRED.

(4273) TITLE - AUTO PRODUCTION OF STICK PROPELLANT

821 1028 712 300

PROBLEM - PRESENT BATCH TECHNIQUES FOR STICK PROPELLANT MFG INVOLVE MUCH HAND LABOR THEREBY RESULTING IN LIMITED PRODUCTION CAPACITY, HIGH COST, AND HAZARD EXPOSURE.

SOLUTION - INSTALL AND EVALUATE PROTOTYPE EQUIPMENT TO AUTOMATE THE TAKE-AWAY AND CUTTING OPERATIONS FOR SOLVENT-TYPE STICK PROPELLANT. THIS PROCESS WILL OPERATE WITH EXISTING 12 INCH PRESS AND PRESS BAY.

(4615) TITLE - IMPROVED SOLVENTLESS PASTE BLENDING

600 753 200

PROBLEM - PASTE BLENDING AND FINAL BLENDING OF STICK PROPELLANT IS NOW REQUIRED. A MORE INTENSIVE PASTE BLEND MAY ALLOW ELIMINATION OR REDUCTION OF THE FINAL BLENDING STEP.

SOLUTION - PURCHASE, INSTALL AND EVALUATE PROTOTYPE EQUIPMENT TO IMPROVE PASTE BLENDING.

PROBLEM - VARIOUS HIGH ENERGY AND LOVA GRANULAR AND STICK MULTI-BASE PROPELLANTS ARE BEING DEVELOPED. BATCH FACILITIES FOR MULTI-BASE HAVE A CONSTRAINED CAPACITY. A NEW CAMBL IS BEING BUILT BUT HAS NOT PROVEN CAPABLE OF MANUFACTURING STICK PROPELLANTS.

SOLUTION - ADAPT RECENTLY DEVELOPED CAMBL PROCESS TO DEMONSTRATE THE MASS PRODUCEABILITY OF THE NEW PROPELLANTS. THIS WILL INSURE A PRODUCTION BASE FOR STICK PROPELLANT AND PREVENT HAVING TO USE AND/OR BUILD INEFFICIENT BATCH FACILITIES.

(4544) TITLE - DEVELOP A THIRD GENERATION DYNAGUN TO SIMULATE TANK GUNS

416 317

PROBLEM - STANDARD BALLISTIC EVALUATION TESTS ARE THE ONLY MEANS AVAILABLE FOR ASSESSING PROPELLANTS FOR HIGH PRESSURE/HIGH VELOCITY SYSTEMS SUCH AS THE 105MM AND 120MM TANK GUNS. THESE PROCEDURES ARE VERY EXPENSIVE AND TIME CONSUMING.

SOLUTION - DEVELOP A THIRD GENERATION DYNAGUN WHICH CAN BE USED IN LIEU OF STANDARD BALLISTIC TESTS AS A MORE RAPID AND LESS COSTLY MEANS OF ASSESSING PROPELLANTS FOR THE 105MM AND 120MM TANK GUNS.

(4572) TITLE - IMPROVED BATCH PROCESSING OF MULTI BASE PROPELLANTS

PROBLEM - CURRENTLY THE NC MFG BASE IN THIS COUNTRY HAS BEEN LIMITED TO SMALL LOT PRODUCTION. SINCE THE CONTRACTOR DOES NOT WANT TO UPGRADE HIS FACILITIES FOR A PROD SOURCE, THE GOVT IS COMMITTED TO ESTABLISHING AN NC PAPER MFG BASE TO MEET PROJECTED NEED.

SOLUTION - THIS PROJECT WILL DEVELOP MFG TECHNIQUES, DEFINE SPECIFICATIONS AND SOP REQUIREMENTS, IDENTIFY THE NC PAPER MFG PARAMETERS AND HARDWARE OPERATIONAL REQUIREMENTS TO SUPPORT OPERATION OF THE PAPER MANUFACTURING LINE.

(4690) TITLE - IMPROVED DEHYDRATION OF NITROCELLULOSE

701

PROBLEM - TWO METHODS ARE USED FOR ALCOHOL DEHYDRATION OF NC. ALCOHOL PRESS DEHYDRATION PRODUCES A TIGHTLY COMPACTED BLOCK WHICH MUST BE BROKEN BY MECHANICAL MEANS, RESULTING IN LUMPS OF NC WHICH ARE DIFFICULT TO SOLVATE. THERMAL DEHY, 2ND METHOD, USES HI ENERGY.

SOLUTION - IMPROVED METHODS FOR NC DEHY WILL BE EVALUATED WITH EMPHASIS ON SCREW EXTRUSION AND CENTRIFUGAL OPERATION. THESE OPERATIONS AS WELL AS OTHER LATEST TECH WILL BE INVESTIGATED TAKING INTO ACCOUNT THE SOLVENT SYSTEMS PRESENTLY USED FOR PROP PROCESSES.

WEAPONS PROGRAM

The major portion of the weapons related MMT projects are conducted by two AMCCOM arsenals; Watervliet Arsenal (WVA) and Rock Island Arsenal (RIA). The main emphasis of their programs is the modernization and upgrading of operations through the REARM program. The purpose is to reduce costs and improve product quality by taking advantage of the advances in metalworking technology.

Many of the projects planned for FY 84-88 at Watervliet Arsenal are related, in whole or in part, to the handling and fixturing of cannon tubes and their components. Since many items produced at Watervliet are large, complex and/or require close tolerances, the setup and movement time are important cost drivers.

A major cost driver at WVA is metal removal. Since the alloys used in weapons are expensive and difficult to work, producing components close to final shape will reduce the cost and time required for finishing. Methods being explored include hot isostatic pressing (HIP) and rotary forging. Projects are also proposed to improve the metal removal process. High speed metal removal is addressed in several projects. One such project addresses energy adaptive grinding which makes full use of the cutting capacity of the abrasive wheel. Some of the other areas in the Watervliet submission include computer integrated manufacturing, computer-aided manufacturing, non-traditional surface hardening methods, chromium plating, tantalum coating, and electropolishing to reduce fatigue failures in gun tubes.

Cost reductions and productivity increases in manufacturing continue to be the prime objectives of MMT at Rock Island Arsenal. Because RIA is a job-shop organization, administration and planning overhead is a significant cost driver. By developing an integrated computer-aided manufacturing/managment information system the Arsenal will be able to efficiently control all operations from receipt of an order to delivery of the product. Some of the management areas addressed include process modeling, performance measurement, computer-aided work measurement system, and online production information system. Cost benefits are also expected from improved material handling and in-process control projects which are tied into the overall CAM/MIS effort at RIA. Efforts in this area include robot loading of machines and automated process control.

Since RIA's task is primarily metalworking, there are several projects included in this area. While all efforts will in themselves reduce costs, coupling with the Arsenal's overall CAM/MIS will further increase the benefits. Some of the areas covered include automated control of foundry melt composition, automated forging centers, and a study to establish a flexible machining system.

COMPONENT -- ASSEMBLY

(8321) TITLE - ADHESIVE BONDING FC SYSTEMS

340

PROBLEM - CURRENT ASSEMBLY METHODS DO NOT TAKE FULL ADVANTAGE OF THE MANY ADVANCED ADHESIVE SYSTEMS AVAILABLE. MANY OPERATIONS COULD BE CONVERTED WITH SIGNIFICANT SAVINGS IN BOTH TIME AND MONEY AND WITH INCREASED RELIABILITY.

SOLUTION - SELECT A SERIES OF ASSEMBLY OPERATIONS AS CANDIDATES FOR ADHESIVE BONDING, DESIGN BONDING SYSTEMS, APPLY, TEST AND EVALUATE. PREPARE PROCESS SPECIFICATIONS FOR THE SUCCESSFUL SYSTEMS.

COMPONENT -- GENERAL

(8327) TITLE - COMPUTER INTEGRATED MFG (CIM F/FC MATERIAL) (CAM)

530

PROBLEM - MANUFACTURING METHODOLOGIES AND THE APPLICATION OF CAD AND CAM TO FC MANUFACTURING HAS ONLY PRODUCED ISOLATED IMPROVEMENTS AND MANY OF THE MAJOR PRODUCTION PROBLEMS STILL PREVAIL.

SOLUTION - A SYSTEMS APPROACH WITH COMPUTER INTEGRATED MANUFACTURING METHODOLOGIES TO ESTABLISH A CLOSE-LOOP SYSTEM FOR THE DESIGN-THROUGH MANUFACTURING PROCESS FOR FC, INCLUDING PLANNING ENGINEERING, QA, AND DECISION MAKING.

COMPONENT -- OPTICS

(8262) TITLE - PRODUCTION METHODS FOR OPTICAL WAVE GUIDES

105

PROBLEM - MANUFACTURE OF INTEGRATED WAVEGUIDES IS COMPLICATED AND TIME CONSUMING INVOLVING PROCESSES RELATED TO METHODS USED TO MAKE SEMICONDUCTOR INTEGRATED CIRCUITS.

SOLUTION - USE ION IMPLANTATION TO ALTER OPTICAL PROPERTIES OF GALLIUM ARSENIDE AND PHOSPHIDE SUBSTRATES TO DIRECTLY FORM OPTICAL WAVEGUIDES IN A ONE-STEP PROCESS.

(8329) TITLE - FIRE CONTROL OPTICAL DEVICES NEW PROCESS PRODUCTION TECH

296

PROBLEM - PRODUCTION DELAYS AND COST OF REWORKS HAVE BEEN A GREAT LOGISTICS PROBLEM. THERE HAS BEEN A SIGNIFICANT SHORTFALL IN PRODUCTION CAPABILITY.

SOLUTION - ASSESSMENT OF NEW PROCESS TECHNOLOGY, UPDATED EQUIPMENT AND OPTIMIZED PROCESSES IS NECESSARY FOR THE ASSEMBLY OF A PILOT PRODUCTION LINE CAPABLE OF DEMONSTRATING HIGH SPEED PRODUCTION AND IMPROVED INSPECTION TECHNIQUES.

(8365) TITLE - RADIAL GRADIENT INDEX OPTICS

520

PROBLEM - GRADIENT INDEX OPTICAL ELEMENTS CAN IMPROVE THE PERFORMANCE OF ARMY OPTICAL SYSTEMS AND REDUCE PRODUCTION COST. RADIAL INDEX OPTICS HAVE BEEN PRODUCED UNDER LAB CONDITIONS BUT NOT IN LARGE SCALE.

SOLUTION - VAPOR PHASE AXIAL DEPOSITION OR ELECTRIC FIELD ASSISTED DIFFUSION USED TO PRODUCE RADIAL GRADIENT INDICES IN OPTICAL ELEMENTS ON A LAB SCALE WILL BE EXPANDED TO ENABLE PILOT PRODUCTION OF OPTICAL BLANKS.

COMPONENT -- EQUIPMENT

(7615) TITLE - AUTOMATED FORGING OF WEAPON COMPONENTS (CAM RELATED)

PROBLEM - PRESENT FORGING METHODS ARE COMPARATIVELY SLOW AND COSTLY DUE TO CONVENTIONAL EQUIPMENT SPEED LIMITATIONS AND DEPENDENCY ON THE SKILL AND SPEED LEVELS OF THE OPERATOR. WORKING CONDITIONS AROUND DROP HAMMERS ARE HOT, DIRTY AND NOISY.

SOLUTION - ESTABLISH A HIGH SPEED AUTOMATED FORGING CENTER INCLUDING A PROGRAMMABLE FORGING HAMMER, ELECTRIC BILLET-HEATING SYSTEM, PROGRAMMABLE RUBUT MATERIAL HANDLING DEVICE, RELATED CONVEYORS AND OPERATION PARAMETERS.

(8154) TITLE - COMPUTER INTEGRATION MFG FOR CANNON (CIM)

PROBLEM - NUMERICAL CONTROL MACHINE TOOLS OFFER MANY ADVANTAGES OVER CONVENTIONAL MACHINE TOOLS BUT HAVE CERTAIN DISADVANTAGES. ONE PROBLEM AREA IS GETTING MACHINE INSTRUCTIONS TO THE MACHINE TOOL AND COLLECTING MANAGEMENT INFORMATION.

SOLUTION - INTERFACE IN-HOUSE COMPUTER FACILITIES WITH CURRENT AND FUTURE NC MACHINE TOOLS TO FORM AN ADVANCED COMPUTER INTEGRATED MFG SYSTEM. UTILIZE DNC TECHNOLOGY.

(8416) TITLE - FLEXIBLE MACHINING SYSTEM-RIA (CAM)

PROBLEM - FLEXIBLE MACHINING SYSTEM (FMS) TECHNOLOGY OFFERS MANY ADVANTAGES TO PLANTS THAT MANUFACTURE PARTS ON LOW TO MID VOLUME QUANTITIES. HOWEVER, ESTABLISHING FEASIBILITY, PURCHASING, AND IMPLEMENTING FMS IS WIDE IN SCOPE AND VERY COMPLEX.

SOLUTION - FEASIBILITY WILL BE ESTABLISHED VIA AN FY82 PROJECT. THIS PROJECT WILL PERFORM THE ANALYSES NEEDED TO DEVELOP A REQUEST FOR PROPOSAL (RFP). A RFP WILL BE PREPARED.

COMPONENT -- EQUIPMENT (CONTINUED)

(8424) TITLE - AUTOMATIC/ROBUTIC WELDING OF WEAPON COMPONENTS (CAM) 438 328

PROBLEM - THE REPAIR OF DEFECTIVE WELDS ARE FREQUENTLY EXPERIENCED. REPAIR REQUIREMENTS ARE OFTEN TRACED TO THE SKILL LEVEL OF THE WELDING OPERATORS.

SOLUTION - ADAPTIVE CONTROLS ARE BEING USED IN AN INCREASING NUMBER OF WELDING APPLICATIONS TO DEEMPHASIZE OPERATOR SKILL IN MAKING CONSISTENT PRODUCT. SUCH FEEDBACK CONTROL ROBOTS SHOULD BE USED ALSO IN WEAPONS FABRICATION.

(8501) TITLE - NON-ROTATION METHODS OF FRICTION WELDING 460

PROBLEM - ROTATIONAL FRICTION WELDING IS CONFINED TO APPLICATIONS IN WHICH AT LEAST ONE OF THE TWO PIECES TO BE JOINED HAS A CIRCULAR OR NEAR-CIRCULAR CROSS SECTION.

SOLUTION - NON-ROTATION FRICTION WELDERS SUCH AS ORBITAL AND OSCILLATORY TYPES ARE NOW AVAILABLE WHICH OVERCOME RESTRICTIONS ON SHAPE.

(8532) TITLE - ARMCAM FOR FUTURE CAM ACTIVITIES 275

PROBLEM - IN CONDUCTING SEPARATE EFFORTS ON CAM, IT CAN BE EXPECTED THAT PURCHASED EQUIPMENT MAY NOT BE FULLY UTILIZED OR SOFTWARE MAY NOT BE COMPATIBLE WITHIN VARIOUS CAM SYSTEMS USED BY DIFFERENT ARMY INSTALLATIONS AND SUPPLIERS.

SOLUTION - DEVELOP A MASTER PLAN FOR ARMY CAM ACTIVITIES. IT WILL OUTLINE MEDIUM TO LONG-RANGE GOALS FOR FURTHER CAM APPLICATION AND DETERMINE WHAT MFG AREAS REQUIRE MORE EMPHASIS.

(8608) TITLE - STATE-OF-THE-ART LADLE/FURNACE REFINING 117

PROBLEM - THERE ARE NO PROVISIONS IN PROJECT 6838251, IMPROVED MELTING PRACTICES, TO IMPLEMENT TECHNIQUES THAT REQUIRE PURCHASE OF MAJOR ITEMS SUCH AS AN ARGON OXYGEN DECARBURIZATION FURNACE.

SOLUTION - THIS PROJECT WILL BE USED TO INSTALL NEW FURNACE/LADLE EQUIPMENT. THE BEST PROCESS PARAMETERS WILL BE DETERMINED AND CONTROLS WILL BE EVALUATED.

(8704) TITLE - ROBUTICS FOR CLEANING CASTINGS 420

PROBLEM - CLEANING THE CASTINGS AND REMOVING THE GATES AND RISERS IS LABOR INTENSIVE AND HOISTS ARE NEEDED TO POSITION THE CASTINGS. THE CASTINGS ARE OFTEN DAMAGED FROM FREQUENT REPOSITIONING. GRINDING OF GATES AND RISERS CREATES A HOSTILE ENVIRONMENT.

SOLUTION - USE A ROBOTIC SYSTEM FOR CLEANING AND REMOVING THE GATES AND RISERS. THE PRODUCTIVITY WILL IMPROVE, CASTINGS WILL NOT HAVE TO BE REPAIRED OR REJECTED AS FREQUENTLY, AND WORKERS WILL NOT BE EXPOSED TO THE HOSTILE ENVIRONMENT.

COMPONENT -- INFORMATION SYSTEM

(0616) TITLE - BINARY CUTTER LOCATION EXCHANGE (CAM)

75

PROBLEM - ONE OF THE INEFFICIENCIES OF NC IS ASSOCIATED WITH THE UNIQUE POST PROCESSORS REQUIRED FOR DIFFERENT MACHINE TOOLS.

SOLUTION - THIS PROJECT WILL UPGRADE WATERLIET ARSENALS NC PROGRAMMING CAPABILITY TO PRODUCE BINARY CUTTER LOCATION (BCL) DATA. BCL PROCESSING OFFERS A SOLUTION TO THE POST PROCESSING PROBLEM.

(0637) TITLE - SIMULATION + MODELING OF PROTO MFG - WEAPONS + FIRE CONTROL

380

PROBLEM - THE CURRENT PROCEDURES ASSOCIATED WITH BUILDING AND TEST PROTOTYPES TO VERIFY THEIR CONFORMANCE TO SPECIFICATIONS AND PERFORMANCE REQUIREMENTS ARE EXPENSIVE AND LENGTHY.

SOLUTION - ESTABLISH A COMPUTER SIMULATION AND MODELING FACILITY TO OPTIMIZE DESIGN, MANUFACTURING PROCESSES, AND MANUFACTURING SYSTEM.

COMPONENT -- INFORMATION SYSTEMS

(0132) TITLE - PERFORMANCE MEASUREMENT PARAMETERS FOR GOGO MFG.

100

PROBLEM - MEASURING THE PERFORMANCE OF A GOVERNMENT MANUFACTURING OPERATION IS DIFFICULT. GOGO OPERATIONS, ALTHOUGH PARTIALLY COMPETITIVE, ARE NOT IN A FULLY COMPETITIVE MARKETPLACE. ACCOUNTING DATA BY ITSELF IS NOT SUFFICIENT TO MEASURE PERFORMANCE.

SOLUTION - DEVELOP A SERIES OF MEASUREMENTS THAT COMBINE ACCOUNTING DATA AND PRODUCTION DATA TO ADEQUATELY ASSESS PERFORMANCE. INCLUDE DATA ON TECHNOLOGICAL IMPROVEMENTS, INFLATION, PRODUCT COST, ETC. MEASUREMENTS WILL BE USEFUL IN LONG RANGE PLANNING.

(0305) TITLE - INTEGRATED MANUFACTURING SYSTEM (ICAM)

574 1677 950 1500 2084 2000

PROBLEM - MI SYSTEMS ARE APPLIED LOCALLY BUT THERE IS NO DATA MANAGEMENT SYSTEM FOR THE ENTIRE MFG ACTIVITY. THIS INCREASES COST DUE TO LONG LEAD TIMES, SCHEDULE INTERRUPTIONS AND SHORTAGES OF MACHINE AVAILABILITY, LABOR AND MATERIAL.

SOLUTION - DEVELOP AN MIS WHICH ADDRESSES ACTIVITIES OF ALL DIRECTORATES SUPPORTIVE TO MANUFACTURING AT RIA. THE SYSTEM WILL USE STATE-OF-THE-ART TECHNOLOGY TO DELINEATE OPTIMUM SCHEDULING AND PIN POINT POTENTIAL PROBLEM AREAS FOR EASIER RESOLUTION.

(0306) TITLE - ON-LINE PRODUCTION INFORMATION SYSTEM (CAM)

270 571

PROBLEM - THE MANUFACTURING DATA BASE CANNOT BE ACCESSED THROUGH AN ON-LINE DATA BASE SYSTEM, MAKING INTEGRATION OF AUTOMATED SYSTEMS FOR PROCESS PLANNING, TIME STDS GENERATION, FACILITIES/MOBILIZATION PLANNING AND PRODUCTION CONTROL SIMULATION DIFFICULT.

SOLUTION - DEVELOP THE MANUFACTURING DATA BASE FROM ITS PRESENT BATCH ORIENTATED ENVIRONMENT TO AN ON-LINE SYSTEM.

COMPLEMENT -- INFORMATION SYSTEMS (CONTINUED)

(8417) TITLE - FACTORY INFORMATION MANAGEMENT - RIA (CAM)

PROBLEM - THE EXCHANGE OF INFORMATION WITHIN THE ROCK ISLAND ARSENAL MANUFACTURING ORGANIZATION IS BY HARDCOPY REPORTS. THE GENERATION OF MANUFACTURING MANAGEMENT REPORTS IS LABOR INTENSIVE AND ERROR PRONE.

SOLUTION - THE REQUIREMENTS FOR RIA MANUFACTURING MANAGEMENT OF PRODUCTION DATA WILL BE DEFINED AND A PILOT COMPUTER SYSTEM WILL BE PRECURED.

(8559) TITLE - CIM FOR CANNON CAD/CAM/CONM

PROBLEM - THE EXCHANGE OF MANUFACTURING DATA AT WATERVLIET ARSENAL IS LARGELY MANUAL, ERROR PRONE AND TIME CONSUMING. CURRENT PROCESS PLANNING, SCHEDULING, AND PRODUCTION CONTROL SYSTEMS EXCHANGE DATA MANUALLY.

SOLUTION - DETERMINE THE SYSTEM REQUIREMENTS FOR A COMPUTER AIDED DESIGN SYSTEM. DETERMINE THE SYSTEM REQUIREMENTS TO INTEGRATE THE COMPUTER AIDED MANUFACTURING FACILITIES AND BUSINESS SYSTEMS. THE SYSTEM REQUIREMENTS WILL BE ADDRESSING EXISTING AND NEAR TERM.

(8635) TITLE - PROCESS CONTROL + INFORMATION SYSTEM (CAM)

PROBLEM - SEVEN METAL FINISHING FACILITIES AT WATERVLIET ARSENAL NEED MONITOR AND CONTROL SYSTEMS. SOME OF THESE FACILITIES ARE BEING AUTOMATED UNDER OTHER EFFORTS. MANUAL FUNCTIONS CONTROL 3 OF THE 7 SYSTEMS. A LESS THAN OPTIMUM FINISH OR COATING RESULTS.

SOLUTION - DETERMINE FACTORS RELATING TO CONTROL AND MONITOR OF SURFACE TREATMENT PROCESSES. ESTABLISH REQUIREMENTS FOR AN AUTOMATED PROCESS DATA ACQUISITION SYSTEM, WHICH WILL ESTABLISH AN ELECTRONIC DATA BASE REQUIRED FOR MANAGEMENT DECISIONS.

COMPLEMENT -- MISCELLANEOUS

(8664) TITLE - OPTICAL COATING/MOUNTING PLASTICS F/MILITARY OPTICS

PROBLEM - LACK OF OPTICAL PERFORMANCE, THERMAL STABILITY, ENVIRONMENTAL RESISTANCE HAS PREVENTED USE OF THESE MATERIALS FOR ARMY APPLICATION. USE OF PLASTICS FOR FIRE CONTROL OPTICAL SYSTEMS OFFERS SIGNIFICANT POTENTIAL FOR COST AND WEIGHT REDUCTIONS.

SOLUTION - THIS PROJECT WILL IDENTIFY THE MFG PROCEDURES AND CONTROLS AND THE PLASTIC MATERIALS WHICH MUST BE MODIFIED TO UPGRADE THE MANUFACTURED ITEM TO MILITARY QUALITY. A PILOT PRODUCTION LINE WILL BE ESTABLISHED.

COMPONENT -- MISCELLANEOUS

(CONTINUED)

(8535) TITLE - DETERMINATION OF AREAS WITHIN MANTECH FOR FUTURE R+D

PROBLEM - WITH THE ADVENT OF THE NEW ARMY BATTLE PLAN, FIELD CAPABILITY FOR MANUFACTURING REPLACEMENT PARTS AND REPAIRS WILL BE NEEDED. THE ECONOMICS, FUTURE DEVELOPMENTS, SIGNIFICANT PROCESSES AND COMPONENTS REQUIRING NEW TECHNIQUES NEED IDENTIFICATION.

SOLUTION - BY COMPILING INFO ON MFG OF MILITARY HARDWARE FROM DOMESTIC AND FOREIGN SOURCES, DETERMINE THOSE ITEMS WHICH ARE DIFFICULT/EXPENSIVE TO MFG AND SUGGEST POSSIBLE PRODUCTION TECHNIQUES FOR CONUS OR BATTLEFIELD USES.

COMPONENT -- PROCESSES

(8120) TITLE - ADAPTIVE CONTROL TECHNOLOGY (CAM)

555

203

PROBLEM - CURRENT GRINDING PROCESSES DO NOT TAKE ADVANTAGE OF THE GRINDING WHEEL CUTTING EFFICIENCY. PRECISION TOLERANCES ARE DIFFICULT TO HOLD DUE TO PART HEATING. WHEEL WEAR RATES INCREASE EXPONENTIALLY WITH FEED RATES AND LIMIT PRODUCTIVITY.

SOLUTION - USE A PROCESS CALLED ENERGY ADAPTIVE GRINDING. IT USES AN ADAPTIVE CONTROL, FITTED TO A CYLINDRICAL GRINDER. WHEEL SPEED, WHICH DETERMINES WHEEL SHARPNESS WHICH EFFECTS METAL REMOVAL RATES AND EFFICIENCY, IS CONTROLLED.

(8206) TITLE - APPLICATION OF HIGH-RATE ABRASIVE MACHINING

105

PROBLEM - CONVENTIONAL GRINDING IS SLOW AND COSTLY. LONG, MULTIPLE PASSES AND INFEDS ARE REQUIRED TO SIZE AND FINISH WEAPON COMPONENTS.

SOLUTION - APPLY HIGH-SPEED ABRASIVE-BELT MACHINING.

(8250) TITLE - NON-SOLVENT BASED PAINTING PROCESSES

250

PROBLEM - CURRENTLY, SPRAY PAINT BOOTHs ARE USED FOR COATING METALS FOR HIDING POWER AND CORROSION RESISTANCE. THIS METHOD REQUIRES HYDROCARBON SOLVENTS AS A VEHICLE FOR THE PAINT. CONSEQUENTLY, THE SOLVENT IS DISCHARGED TO THE ATMOSPHERE.

SOLUTION - NEW SPECIFICATIONS MUST BE PREPARED TO SPECIFY THE USE OF NON-SOLVENT BASED PAINT. METHODS SUCH AS ELECTROSTATIC PAINTING WILL BE ADAPTED TO ELIMINATE HYDROCARBON SOLVENTS. THIS WILL ALSO REDUCE WATER CONSUMPTION REQUIRED FOR ENTRAPMENT OF SOLVENTS.

(8251) TITLE - IMPROVED CASTING TECHNOLOGY (CAM)

386

122

PROBLEM - EXCESSIVE METAL MUST BE MELTED IN CASTING OPERATIONS. THE YIELD RATIO OF SOME CASTS IS TOO LOW AND THE GATES AND RISERS TOO DIFFICULT TO CUT OFF. MATERIAL PROPERTIES OFTEN VARY WITH CASTING PROCEDURES.

SOLUTION - USING COMPUTERIZED TECHNIQUES AND PRODUCTION CASTING FACILITIES, THE OPTIMUM SHAKE OUT TIMES, RISER SLEEVES AND GATING AND RISER CONFIGURATIONS WOULD BE DETERMINED. PROPERTIES OF CAST MATERIALS WILL BE EVALUATED FOR DIFFERENT CAST DESIGNS.

CUMPLMENT -- PROCESSES

(8360) TITLE - ESTABLISHMENT OF ZINC ION VAPOR DEPOSITION PROCESS

235

PROBLEM - REPLACEMENT OF ELECTROPLATING ON WEAPON COMPONENTS IS REQUIRED TO AVOID HYDROGEN EMBRITTLEMENT OF PLATED FERRUS PARTS HAVING A HARDNESS ABOVE ROCKWELL C40 AND TO AVOID THE DISCHARGE OF CYANIDES AND HEAVY METALS IN EFFLUENTS.

SOLUTION - THE ZINC ION VAPOR DEPOSITION PROCESS PROVIDES A LOW COST, HIGH PERFORMANCE CORROSION PROTECTION TO STEEL AND ALUMINUM ALLOYS. NEITHER THE COATING NOR THE COATING PROCESS PRESENT ECOLOGY PROBLEMS.

(8402) TITLE - WARM FORGING OF WEAPON COMPONENTS (CAM)

227 127

PROBLEM - EXCESSIVE ENERGY IS CONSUMED IN CONVENTIONAL FORGING. ALSO DIE LIFE IS SHORTENED BY HIGH FORGING TEMPERATURES AND BY OXIDATION.

SOLUTION - BY USING CAD/CAM TECHNIQUES FOR DIE DESIGN, FORGING WILL BE DONE AT MUCH LOWER TEMPERATURE AND THE FINAL PARTS WILL HAVE BETTER MECHANICAL PROPERTIES

(8403) TITLE - DESIGN CRITERIA FOR HARDENING (CAN)

201 154

PROBLEM - SELECTION OF THE BEST HARDENING PROCESS. INCOMPLETE HARDENING THROUGHOUT THE COMPONENT AND COMPLICATIONS CAUSED DURING THE HEAT TREATMENT OF WELDMENTS ARE RECURRING PROBLEMS CURRENTLY ADDRESSED BY EMPIRICAL METHODS.

SOLUTION - THE RELATIONSHIPS OF DIFFERENT VARIABLES SUCH AS QUENCH RATES, COMPONENT SIZE, SHAPE, AND COMPOSITION WILL BE ESTABLISHED. A COMPUTER WILL BE PROGRAMMED TO FURNISH THE NECESSARY INFORMATION

(8503) TITLE - ELECTRO-MECHANICAL JOINING TECHNIQUES

200

PROBLEM - PURELY MECHANICAL (FRICTION WELDING) OR MOSTLY ELECTRICAL (RESISTANCE) WELDING MACHINES OF VARIOUS TYPES WOULD HAVE TO BE LARGE AND WOULD TAKE EXCESSIVE TIME TO WELD JOINT AREAS 25 SQUARE INCHES OR MORE.

SOLUTION - COMBINE THE FEATURES OF BOTH METHODS TO DELIVER SUFFICIENTLY LARGE SPECIFIC ENERGY FOR WELDING OF LARGE PARTS

(8509) TITLE - COMPUTERIZED FOUNDRY MELT COMPOSITION CONTROL (CAM)

125 369

PROBLEM - PRESENT METHODS FOR DETERMINING THE MELT CHARGE ARE INEFFICIENT + INCREASE MELT TIME CONSUME EXCESS ELECTRICITY AND ELECTRODES THEREBY INCREASING COSTS.

SOLUTION - INSTALL COMPUTER CONTROLS TO MONITOR THE MELT AND ELECTRIC POWER AND ELECTRODE THE RESULT WILL BE MORE ACCURATE COMPOSITIONS AND POUR TEMPERATURES THE RESULT WILL BE LOWER COST CHARGES + LESS ENERGY AND ELECTRODE CONSUMPTION.

COMPONENT -- PROCESSES

(8513) TITLE - MICROWAVE CURING OF FURAN BONDED SAND

250

PROBLEM - CURE RATE OF FURAN BOND SANDS DEPENDS ON THE ACID CATALYST/RESIN RATIO AND THE SIZE AND TEMP OF THE MOLD. SINCE PDN RATES ARE HIGH, SOME RATIOS CANNOT BE USED WHILE USEABLE RATIOS ARE A COMPROMISE BETWEEN VALUES FOR LARGE AND SMALL MOLDS.

SOLUTION - USE MICROWAVE HEATING TO CHANGE THE CURE CHARACTERISTICS OF SELECTED RESIN-CATALYST SYSTEMS TO COMPENSATE FOR DIFFERENT SIZES OF MOLDS. THIS WILL PERMIT A MORE UNIFORM PRODUCTION RATE.

(8515) TITLE - APPLICATION OF WIDE AREA PLUNGE GRINDING

105

PROBLEM - CONVENTIONAL MACHINING OF WORKPIECES WITH MULTIPLE DIAMETERS AND BLENDED TAPERS AND RADII REQUIRES MANY OPERATIONS AND IS SLOW AND COSTLY.

SOLUTION - USE A WIDE GRINDING WHEEL WHOSE FACE IS DRESSED TO THE REQUIRED PROFILE AND PRODUCE THE FINISHED PIECE IN ONE OPERATION BY PLUNGE GRINDING TO SIZE.

(8522) TITLE - LASER SURFACE ALLOYING PROCESS FOR IMPROVED WEAR RESISTANCE

300

PROBLEM - COMPONENT PARTS OF WEAPON SYSTEMS SUBJECTED TO EXTENDED OPERATIONS ARE EXPERIENCING EXCESSIVE WEAR THAT JEOPARDIZES THE DRIVE TOWARD HIGH PERFORMANCE CAPABILITY.

SOLUTION - marginally wear resistance component parts can be substantially upgraded by laser surface alloying with hardfacing material designed to improve its wear resistance.

(8523) TITLE - ION IMPLANTATION OF WEAPON COMPONENTS

375

PROBLEM - COMPONENT PARTS OF WEAPON SYSTEMS SUBJECTED TO EXTENDED OPERATIONS ARE EXPERIENCING EXCESSIVE WEAR THAT JEOPARDIZES THE DRIVE TOWARD HIGH PERFORMANCE CAPABILITY.

SOLUTION - marginally wear resistance component parts can be substantially upgraded by ion implanting elemental species designed to improve its wear resistance.

(8534) TITLE - CONSERVATION OF ENERGY IN PROCESSING OF WEAPONS COMPONENTS

350

PROBLEM - PRESENT HEAT TREAT TECHNIQUE AND SELECTION OF HEAT TREAT EQUIPMENT RELIES ON PAST EXPERIENCE AND IS NOT BASED ON SCIENTIFIC CALCULATIONS.

SOLUTION - EVAL PRESENT TECHNIQUES AND EQUIPMENT. DEVELOP COMPUTER-AIDED-MODULAR METHOD TO PREDICT MIN TIME REQD TO HEAT A PART. DEVELOP MODELS TO COMPARE COSTS TO HEAT A GIVEN PART BY VARIOUS MEANS (GAS, INDUCTION, RESISTANCE, ETC).

250 200 200

(8603) TITLE - ROBOTIC WELDING

PROBLEM - PRODUCTIVITY IN THE WELD SHOP IS LIMITED BECAUSE THE MAJORITY OF THE WELDING IS DONE MANUALLY.

SOLUTION - MULTIPLE AXIS ROBOTIC WELDERS INTEGRATED WITH MULTIPLE AXIS PART HANDLING SYSTEMS, PALLETIZING, PREHEAT FURNACES, STRESS RELIEVING OVENS, AND FIXTURING CAN REDUCE COSTS WHILE IMPROVING RATES.

185 158 50

(8605) TITLE - RING ROLLING OF WEAPON COMPONENTS

PROBLEM - COMPONENTS WITH RING LIKE SHAPE OFTEN REQUIRE EXTENSIVE METAL REMOVAL OVER ALMOST THE ENTIRE SURFACE BECAUSE TUBING OF THE OPTIMUM SIZE FOR RAW MATERIAL IS NOT AVAILABLE. THIS INCREASES PRODUCTION COSTS.

SOLUTION - SIMPLE SHAPED RINGS WITH LITTLE EXCESS MATERIAL WILL BE SHAPED ON SPECIAL RING ROLLING EQUIPMENT TO NEAR NET SHAPE.

190

(8611) TITLE - AUTOMATED ANALYSIS AND CONTROL OF PLATING BATHS

PROBLEM - PERIODIC WET CHEMISTRY ANALYSIS OF PLATING BATHS IS REQD TO MAINTAIN PROPER CHEMICAL BALANCE. THE TIME LAG BETWEEN ANALYSIS AND USE IS A DETRIMENTAL FACTOR.

SOLUTION - APPLY AUTOMATED ANALYTICAL EQUIPMENT FOR THE CONTINUOUS MONITORING OF BATH COMPOSITIONS AND FOR THE AUTOMATIC ADDITION OF THE REQD INGREDIENTS. THIS EQUIPMENT WILL IDENTIFY IMPURITIES IN THE BATH AND ALSO CHECK WASTEWATER.

150

(8613) TITLE - POWDERED METALS FOR NONFERROUS COMPONENTS

PROBLEM - ROCK ISLAND ARSENAL MUST CAST SMALL PARTS FROM AL OR CU ALLOYS THAT ARE NOT VERY CASTABLE. SHRINKAGE, HOT TEARING AND OXIDES CAUSE UNSOUND CASTINGS WITH ATTENDANT LOW ACCEPTANCE RATES.

SOLUTION - IMPROVE ACCEPTANCE BY MAKING THE PROBLEM COMPONENTS FROM POWDERED METAL. COMPARE PROPERTIES OF PM PARTS WITH CAST PARTS. DETERMINE IF ADDITIONAL PROCESSING SUCH AS HIP IS NEEDED AND PERFORM AN ECONOMIC COMPARISON.

(8615) TITLE - ROBOTIZED WELDING OF BASE PLATE (CAM)

150

PROBLEM - MANUAL WELDING IS LARGELY DEPENDENT ON INDIVIDUAL TECHNIQUE. QUALITY AND APPEARANCE OF THE WELD VARY. WELDING IS HAZARDOUS. PROTECTIVE MEASURES ARE REQUIRED TO MINIMIZE RISK OF TOXIC FUMES AND OF THE OCCURRENCE OF BURNS OR EYE INJURY.

SOLUTION - A ROBOTIC WELDING SYSTEM WILL BE SPECIFIED AND PROCURED. THE REQUIREMENTS FOR THE WELDING SYSTEM WILL BE DETERMINED BY THIS EFFORT.

(8638) TITLE - CONTROL OF SEQUENTIAL MACHINING OPERATIONS (CAM)

269 269 200

PROBLEM - PRESENTLY, AN ALMOST ALL AUTOMATED MACHINING OPERATIONS, CUTTING RATES ARE LOWERED TO AVOID TOOL BREAKAGE AND REJECTION OF COMPONENTS. MACHINING PARAMETERS ARE SET BY ALLOWING FOR WORST POSSIBLE CONDITIONS.

SOLUTION - ESTABLISH AN IN-PROCESS INSPECTION AND CONTROL SYSTEM DIRECTED TOWARD DRILLING, REAMING, TAPPING, BORING, INTERNAL GRINDING, AND HONING. THE AUTOMATED, COMPUTERIZED MACHINING SYSTEM WILL INTEGRATE THESE OPERATIONS.

(8671) TITLE - INCLUSION CONTROL TECHNOLOGY APPLIED TO RAPID FIRE WEAPONS

400

PROBLEM - THE USABLE LIFE OF AUTOMATIC WEAPONS BETWEEN DEPOT REBUILDS IS PRIMARILY DEPENDENT UPON CRACK PROPAGATION RESULTING FROM CYCLIC LOADING. IN ORDER TO EXTEND THIS LIFE IT IS NECESSARY TO INCREASE THE FATIGUE RESISTANCE OF THE STEEL.

SOLUTION - POTENTIAL FOR SIGNIFICANTLY IMPROVED LIFE OF RAPID FIRE WEAPONS IS PROVIDED THROUGH APPLICATION OF STATE-OF-THE-ART TECHNOLOGY IN INCLUSION CONTROL.

(8706) TITLE - INVESTMENT CASTING OF LARGE WEAPON COMPONENTS

225

PROBLEM - CONVENTIONAL CASTING RESULTS IN LOW YIELD. THE PARTS USUALLY HAVE LARGE RISERS AND EXTENSIVE GATES THAT CONSUME METAL. MACHINED SURFACES REQUIRE EXTENSIVE MACHINING. THE INACCURATE TOLERANCES ON NONMACHINED SURFACES CONTRIBUTE NEEDLESS WEIGHT.

SOLUTION - INVESTMENT CASTING WILL BE USED FOR LARGER AND MORE COMPLEX PARTS. THIS PROCESS WILL INCREASE THE YIELD, SAVE MONEY BY ELIMINATING WORK FOR REMOVING GATES AND RISERS, REDUCE MACHINING, AND REDUCE THE WEIGHT OF SOME COMPONENTS.

(8709) TITLE - NEAR NET SHAPE MOLDING

160

PROBLEM - CASTINGS ARE NORMALLY POURED IN LARGE SAND MOLDS WHICH EXPAND AND SHIFT AS THEY ARE HEATED BY THE MOLTEN METAL. THE PROCESS YIELDS A CASTING LARGER THAN NECESSARY. EXCESS MACHINING HAS TO TAKE PLACE.

SOLUTION - USING THE SHELL MOLDING PROCESS, THE MOLTEN METAL IS POURED INTO THIN SHELLS OF BUNDED SAND. THESE SHELLS ARE RIGID SO THAT THE FINAL CASTING IS CLOSER IN DIMENSIONS TO THE DRAWING. MACHINING AND WEIGHT ARE REDUCED.

(6710) TITLE - AUTOMATED CONTROL OF CUTTING FLUID CONCENTRATION LEVEL

400

PROBLEM - THE EFFECTIVENESS OF ANY CUTTING FLUID IN A PARTICULAR MACHINING OPERATION IS DEPENDENT ON MAINTAINING THE PROPER CONCENTRATION LEVEL DURING THE TIME THE FLUID IS IN THE MACHINE. AT THE PRESENT TIME, VARIATIONS ARE QUITE COMMON.

SOLUTION - A SINGLE MACHINE, OPERATING FROM ITS OWN SUMP, OR A SERIES OF MACHINES OPERATING FROM A CENTRAL CUTTING FLUID SYSTEM, WILL BE MONITORED SO THAT THE CONCENTRATION LEVEL CAN BE READILY CONTROLLED ON A CONTINUOUS BASIS.

(6712) TITLE - DISPOSITION OF SPENT CHROMIC ACID PLATING SOLUTION

200

PROBLEM - THE DISPOSITION OF SPENT CHROMIC ACID PLATING SOLUTION IS DIFFICULT BECAUSE OF POLLUTION CONTROL RESTRICTIONS ON HAZARDOUS WASTES. IT IS ALSO EXPENSIVE IF PERFORMED IN-HOUSE SINCE THE COST OF DESTROYING CHROME IS 3 TIMES THE PURCHASE PRICE.

SOLUTION - THE APPLICATION OF MODERN CHROMIC ACID RECOVERY OR REPROCESSING TECHNIQUES COULD RESULT IN A REDUCTION IN BOTH THE AMOUNT OF CHROMIC ACID PURCHASED AND DESTROYED.

(8713) TITLE - INDUCTION HARDENING BY THE SCANNING PROCESS

150

PROBLEM - THE CURRENT INDUCTION HARDENING PROCESS DOES NOT PRODUCE UNIFORM CASE DEPTHS NOR DOES IT ACHIEVE UNIFORM CONFIGURATION CONTROL OF LUNETTES FOR THE M101A1, M196 AND M102 WEAPON SYSTEMS. THE QUALITY OF THE PROCESS IS SUSPECT.

SOLUTION - IT IS BELIEVED THAT USE OF A SCANNING TYPE OF INDUCTOR WILL PRODUCE A MORE UNIFORM CASE DEPTH AND BETTER CONFIGURATION CONTROL. THIS WILL IMPROVE THE RELIABILITY AND QUALITY OF THE PRODUCT.

(6715) TITLE - APPLICATION OF METALLIZING

67

PROBLEM - PARTS OF WEAPONS SYSTEM REQUIRE CORROSION OR WEAR RESISTANCE. MATERIAL AND APPLICATION PROCESSES IN USE ARE DIFFICULT AND EXPENSIVE TO APPLY.

SOLUTION - USE METALLIZING COATING ON LOW COST ALLOYS TO PROVIDE SURFACE MODIFICATIONS REQUIRED FOR ADDED RESISTANCE.

COMPONENT -- TOOLING

(8717) TITLE - IMPROVED UTILIZATION OF NEW GENERATION MACHINE TOOLS

50

PROBLEM - CURRENT MACHINING PRACTICES UTILIZE METHODS FROM THE PRECOMPUTER AIDED ERA. NEW METHODS AND PRODUCTIVITY DEMANDS REQUIRE IMPROVED UTILIZATION AND IMPROVED TOOL LIFE.

(8440) TITLE - CONTROLLED GRAIN SIZE CASTINGS, PRODUCTION AND HEAT TREAT

335

PROBLEM - FINE GRAIN CASTINGS HAVE DEMONSTRATED AN IMPROVEMENT IN LOW CYCLE FATIGUE LIFE BY A FACTOR OF TWO TO FOUR, IT IS EXPECTED THAT A HEAT TREATMENT WILL EXTEND THE LIFE STILL FURTHER.

SOLUTION - PROVIDE FOR CASTING A BREECH BLOCK BY ONE OF THE AVAILABLE TECHNIQUES THEN OPTIMIZE THE HEAT TREATMENT FOR THE CHOSEN ALLOY. LIFE IMPROVEMENTS WILL BE DEMONSTRATED.

(8625) TITLE - MANUFACTURING OF MULTI-LUG BREECH MECHANISMS

100

PROBLEM - THE MANUFACTURE OF MULTI-LUG COMPONENTS INVOLVES THE USE OF FORM CUTTERS WHICH ARE USED TO MILL THE REQUIRED CONFIGURATION. ALTHOUGH THIS METHOD HAS BEEN SUCCESSFUL ON A PROTOTYPE BASIS, IT DOES NOT APPEAR TO BE FEASIBLE FOR PRODUCTION QUANTITIES.

SOLUTION - INVESTIGATE ALTERNATIVE METHODS OF MANUFACTURING MULTI-LUG BREECH COMPONENTS, SUCH AS BROACHING AND GRINDING.

(8249) TITLE - SHORT-CYCLE HEAT TREATING OF WEAPON COMPONENTS

132 165

PROBLEM - HEAT TREATING SOAK TIMES ARE DETERMINED WITHOUT CONSIDERATION OF THE RELATIONSHIPS BETWEEN COMPOSITION, CONFIGURATION, THICKNESS, AND DETRIMENTAL EFFECTS OF AUSTENITIC GRAIN GROWTH. CONSEQUENTLY, CONSIDERABLE ENERGY IS WASTED.

SOLUTION - SUITABLE SYSTEMATIC PRODUCTION METHODS WILL BE USED TO DETERMINE THE PROPERTIES OBTAINED AT MINIMAL PROCESSING TIMES TO REDUCE ENERGY CONSUMPTION AND INCREASE PRODUCTION EFFICIENCY.

(8323) TITLE - SPRAY-AND-FUSE PROCESSING OF ARMAMENT COMPONENTS

200 48

PROBLEM - MISMATCHED AND WORN WEAPON COMPONENTS ARE NOT ONLY COSTLY TO REPLACE BUT SHORTAGE OF STRATEGIC MATERIALS IMPACT ON THE SUPPLY AND FABRICATION OF NEW COMPONENTS.

SOLUTION - UTILIZE THE THERMAL SPRAY AND FUSE COATING PROCESS TO SALVAGE OR RECLAIM OVERSIZED OR WORN WEAPON COMPONENTS (E.G., M140 RECDIL PISTONS).

(8326) TITLE - APPLICATION OF CORROSION RESISTANT GALVANIC COATINGS

185

PROBLEM - CURRENT METAL FINISHES DO NOT PROVIDE ADEQUATE CORROSION AND HEAT RESISTANCE. COMPONENTS ARE REPLACED OR REMORKED BEFORE THEIR INTENDED LIFE. FREQUENT MAINTENANCE IN THE FIELD AND DEPOTS ADD TO THE OVERALL COST OF THE COMPONENTS.

SOLUTION - A NEW PROCESS HAS EMERGED FOR APPLYING SUPERIOR CORROSION AND HEAT RESISTANT COATINGS. THE PROCESS, USING SERMIL-16, CONSISTS OF AN AUTOMATED SPRAY-BAKE PROCESS FOR A COATING OF ALUMINUM/CERAMIC AND INORGANIC COATINGS.

(8426) TITLE - APPLICATION OF LASERS TO CANNON MANUFACTURE

622

PROBLEM - COMPONENT MARKINGS, TOOL MAINTENANCE, COMPONENT SURFACE HARDENING, CUTOFF OF INVESTMENT CAST COMPONENTS, WELDING AND BRAZING ARE DIFFICULT, COSTLY, TIME CONSUMING MANUFACTURING OPERATION.

SOLUTION - APPLY LASER TO THESE TRADITIONAL MANUFACTURING OPERATIONS TO TAKE ADVANTAGE OF THIS RAPIDLY EMERGING TECHNOLOGY.

(8437) TITLE - DENSIFICATION OF WEAPON CASTINGS (HIP)

PROBLEM - REPLACEMENT OF SCARRED, WORN OR MISMACHINED RECOIL CYCLINDERS ARE COSTLY AND TIME-CONSUMING IN TERMS OF LONG-LEAD TIMES FOR MATERIAL DELIVERY AND MACHINING. CYCLINDER REPLACEMENT REQUIRES ADDITIONAL CONSUMPTION OF STRATEGIC MATERIALS.

SOLUTION - HUNE FORMING IS A SIMULTANEOUS PROCESS WHERE HUNING AND MATERIAL BUILDOUT BY ELECTROPLATING TAKE PLACE TO ACHIEVE THE DESIRED DIMENSION AND FINISH. COST SAVINGS CAN BE ACHIEVED WITH THE PROCESS FOR RECOIL CYCLINDER MANUFACTURE AND RECLAMATION.

(8511) TITLE - CASTING OF ANTI-FRICTION METAL COMPONENTS

PROBLEM - ANTI-FRICTION METAL FOR PACKING GLANDS IN RECOIL MECHANISMS IS PRESENTLY HAND CAST. OVER 70-80 PERCENT OF THE METAL IS EXCESS + HAS TO BE MACHINED OFF AT ADDED COST.

SOLUTION - USE OF DIE CAST PROCESS WILL REDUCE EXCESS METAL AND THE PROCESS WILL REDUCE CASTING DEFECTS.

(8607) TITLE - AUTOMATED FLUSHING OF RECOIL SYSTEMS TO REDUCE CONTAMINATION

PROBLEM - INEFFECTIVE CLEANING OF MACHINED SURFACES CAUSES METALLIC CONTAMINATION OF THE HYDRAULIC FLUID AFTER THE RECOIL SYSTEM IS ASSEMBLED. SUCH CONTAMINANTS ARE DIFFICULT TO REMOVE WITH NORMAL FLUSHING PROCEDURES.

SOLUTION - ESTABLISH AN AUTOMATED FLUSHING SYSTEM INCORPORATING HIGH PRESSURE TO REMOVE METALLIC CONTAMINATION FROM THE HYDRAULIC FLUID. THIS WILL REDUCE THE NUMBER OF REJECTIONS OF ASSEMBLED RECOIL MECHANISMS AFTER MECHANICAL GYMNASIATION.

(8703) TITLE - AUTOMATED RECOIL MECHANISM ASSEMBLY

PROBLEM - ASSEMBLY AND TESTING OF RECOIL MECHANISMS IN SMALL LOTS AT ROCK ISLAND ARSENAL IS A MANUAL, TIME-CONSUMING PROCESS. TECHNOLOGY SUCH AS INDUSTRIAL ROBOTS AND MICROPROCESSOR CONTROLLED TESTING EQUIPMENT CAN IMPROVE THIS PROCESS.

SOLUTION - ANALYZE THE CURRENT MANUAL METHOD OF ASSEMBLYING THE HYDRAULIC, PNEUMATIC, AND MECHANICAL PARTS OF RECOIL MECHANISMS. IDENTIFY AREAS WHERE AUTOMATED METHODS CAN BE APPLIED. DEVELOP AND INSTALL THOSE METHODS WHICH PROVE MOST EFFECTIVE.

US ARMY AVIATION SYSTEMS COMMAND

(AVSCOM)

The US Army Aviation Systems Command (AVSCOM) serves as the AMC lead command for current and future Army aviation research, development, and procurement. AVSCOM is headquartered in St. Louis, Missouri with subordinate activities located throughout the country. The Research and Technology Laboratories consist of the Aeromechanics Laboratory at NASA Ames Research Center at Moffet Field, California; the Propulsion Laboratory at NASA Lewis Research Center at Cleveland, Ohio; the Structures Laboratory at the NASA Langley Research Center at Langley AFB, Virginia; and the Applied Technology Laboratory at Fort Eustis, Virginia. These labs perform the majority of aeronautical research and development work.

The overall emphasis of the Army's aviation MMT program is to perfect technologies which have a good probability of implementation and high potential benefits. For the most part, efforts are directed towards projects which offer both cost reductions and product improvements. The results of these projects will be made available to other Government agencies and to Industry.

The most important criteria of aircraft materials are strength and low weight. A large part of the aviation MMT program is dedicated to establishing processes to replace metals with materials which have better strength to weight ratios. Composite materials suitable for aviation have been developed and are being used; however, techniques for the production and application of composites need further development to achieve increased use.

The use of composite materials in Army aircraft is anticipated to increase as a result of current work in R&D and MT leading to an all-composite helicopter fuselage. Raw material costs are expected to decrease with the increased use of composites in DOD and Industry. Also, as confidence in the use of composites increases, reservations held by the design and (quality control groups) will diminish, and composites will be incorporated in the earliest stages of weapon development.

Composite projects are planned for virtually every part of the helicopter. Many projects are planned for airframe applications. One project will establish automated methods to eliminate many hand layup and cutting operations required for the fabrication of the cabin section. Another will apply ultrasound techniques to the pultrusion of epoxy resin composites to improve the physical properties of the material and to speed up the processing. A project in the rotor area will establish a new method for assembling tail rotor blades which eliminate three separate cure/bond cycles. This will be accomplished by using an alternate blade core material which is compatible with a single cure cycle. In the drive area, one project will result in methods for manufacturing a filament wound composite gearbox housing.

There are many areas in aircraft in which metals can not be replaced. Projects have been submitted to improve production of these items. Since many aircraft metals used in the propulsion system are tough and expensive, machining to final shape is difficult and produces costly scrap. Improving powder metal technology will provide components much closer to final shape, greatly reducing the time and effort to produce the final product. Several projects are included to implement recent advances in gear manufacturing and should provide an improved item at a lower cost. An effort is planned to replace metal turbine blades with ceramic blades. This will provide better operating characteristics at lower cost.

(7462) TITLE - IMPROVED AIRFRAME MANUFACTURING TECHNOLOGY

681 885 943 2142

PROBLEM - THE GREATEST MANUFACTURING COST DRIVES IN ACAP WERE FOUND IN THE CABIN SECTION DUE TO ITS DESIGN AND GEOMETRIC COMPLEXITY WHICH REQUIRES MANY HAND LAYUP AND CUTTING OPERATIONS.

SOLUTION - ESTABLISH AUTOMATED MANUFACTURING PROCESSES AND REDUCED CURING CYCLES. LOW COST TOOLING, FORMING MULDs, AND CURING PROCESSES WILL BE DEVELOPED.

(7302) TITLE - PROD OF T1B2 COATED LONG LIFE TOOLS

420 112

PROBLEM - AIRFRAME COMPOSITE COMPONENTS REQUIRE EXTENSIVE MACHINING WHICH IS EXPENSIVE IN TERMS OF LABOR HOURS REQUIRED AND TOOL COSTS.

SOLUTION - MANUFACTURE OF T1B2 COATED TOOLS WILL BE SCALED UP FROM LAB-SIZED ELECTROLYTIC CELLS (15 LBS) TO PRODUCTION SIZE (ABOUT 300 LBS) WITH THE CAPABILITY TO PLATE VARIOUS TOOL TYPES AND SHAPES. TOTAL TOOLING COST WILL BE ABOUT 20 PCT OF CURRENT.

(7456) TITLE - LOW COST TOOLING FOR AIRFRAME AND ROTOR COMPONENTS

375 112 755 1325 1000

PROBLEM - HIGH COST METAL TOOLING CONCEPTS OR EXPENSIVE AUTOCLAVE CURING APPROACHES HAVE BEEN USED WHICH RESULT IN EXTENDED CURE CYCLES AND POOR ENERGY CONSERVATION.

SOLUTION - ESTABLISH TECHNOLOGY FOR THE USE OF SELF-CONTAINED INTEGRALLY HEATED PLATIN PRESS TOOLING. THIS WILL ALLOW COMPOSITE COMPONENTS TO BE FABRICATED AT LOW COST DUE TO RAPID CURE TIME AND PRODUCTIBILITY.

(7475) TITLE - ONE PART SEALANT FOR WATER INTEGRITY

390

PROBLEM - CURRENTLY USED TWO PART POLYSULFIDE SEALANTS REQUIRE MIXING/METERING OF BULK CHEMICALS, QUICK FREEZING OF THE MIX, LIMITED FROZEN STORAGE, AND THAWING BEFORE USE. WASTE IS HIGH DUE TO ITS CURE IN THE CONTAINER.

SOLUTION - TO QUALIFY A ONE PART POLYURETHANE SEALANT FOR USE IN AIRCRAFT, WHICH CAN ELIMINATE MUCH OF THE EQUIPMENT USED TO PROCESS AND STORE TWO PART SEALANTS. IT CURES ONLY WHEN EXPOSED TO THE ATMOSPHERE, THUS PROVIDING LONG STORAGE LIFE AND MINIMAL WASTE.

COMPONENT -- SECONDARY STRUCTURES

(7344) TITLE - RIM MOLDING OF LOW COST SECONDARY STRUCTURES

207 256

PROBLEM - PRESENT METHODS OF FABRICATING AIRCRAFT SECONDARY STRUCTURES (ESPECIALLY ACCESS DOORS) INVOLVE EXCESSIVE LABOR AND EXPENSIVE MATERIALS. STRUCTURES MADE FROM FIBER REINFORCED SANDWICH PANELS AND/OR FORMED SHEET METAL OFTEN REQUIRE COMPLEX ASSEMBLY.

SOLUTION - ESTABLISH A PROCESS TO PRODUCE THESE SECONDARY STRUCTURES FROM REACTION INJECTED MOLDED (RIM) URETHANES. RIM IS A LOW PRESSURE MOLDING TECHNIQUE WHICH CAN USE LOW COST COMPOSITE MOLDS TO GIVE EXTREMELY COST EFFECTIVE STRUCTURES.

(7473) TITLE - FIBER REINFORCED THERMOPLASTIC STRUCTURES

187 407 531 500

PROBLEM - CURRENT AIRFRAME SECONDARY STRUCTURES ARE CONSTRUCTED FROM SHEET METAL OR THERMOSETTING COMPOSITES. SHEET METAL CONSTRUCTION REQUIRES MANY DETAIL PARTS AND LABOR, AND THERMOSETTING COMPOSITES REQUIRES EXPENSIVE STORAGE, FORMING AND CURING STEPS.

SOLUTION - USE FIBER REINFORCED THERMOPLASTIC COMPOSITE MATERIALS. THEY ARE LESS EXPENSIVE TO STORE AND FORM. THEY ARE ALSO MORE DAMAGE TOLERANT AND EASIER TO REPAIR IN THEIR APPLICATION. KNITTED AND BRAIDED FABRICS WILL BE USED.

COMPONENT -- STRUCTURAL MEMBERS

(7389) TITLE - SUPERPLASTIC FORMING OF ALUMINIUM COMPONENTS

PROBLEM - HELICOPTER TYPE GEARS HAVE BEEN SUCCESSFULLY SURFACE HARDENED BY LASER. THE PROCESS NEEDS TO BE PRODUCTIUNIZED AND EXPANDED FOR USE ON GEARS SUSCEPTIBLE TO HEAVY LOADS IN ORDER TO OBTAIN HIGHEST COST BENEFITS.

SOLUTION - LASER TECHNIQUES WILL BE APPLIED TO SURFACE HARDENING OF HEAVILY LOADED GEARS AND DEMONSTRATE BY TEST THE GENERIC APPLICABILITY OF THE TECHNIQUES TO SPUR GEARS. BOTH MANUFACTURING AND QUALITY CONTROL METHODS WILL BE DEMONSTRATED.

(7535) TITLE - AUTOMATED PRECISION GRINDING OF SPUR GEARS BY CNC

PROBLEM - THE CURRENT MFG METHOD FOR AIRCRAFT SPUR/HELICAL GEARS IS LABOR INTENSIVE IN FINAL GRINDING THE GEAR TEETH, REQUIRING SEVERAL GRINDING CYCLES INTERSPERSED WITH IN PROCESS INSPECTION FOLLOWED BY 100 PERCENT FINAL INSPECTION.

SOLUTION - DEVELOP A PROTOTYPE -SMART- GEAR GRINDING MACH WHICH WILL INSPECT THE GEAR TEETH IN PROCESS AND GRIND THEM TO NEAR EXACT DIMENSIONS, ALL WITHOUT THE USE OF INDEXING PLATE OR DRESSER CAM.

COMPLMENT -- TRANSMISSION HOUSING

(7378) TITLE - STAINLESS STEEL FABRICATED HOUSING

PROBLEM - HELICOPTER TRANSMISSION HOUSINGS ARE MADE FROM MAGNESIUM CASTINGS. THEY ARE COSTLY AND HAVE HIGH REPLACEMENT RATES AT OVERHAUL DUE TO CRACKS AND CORROSION.

SOLUTION - APPLY VARIOUS FABRICATION TECHNIQUES TO VARIOUS MATERIALS SUCH AS STAINLESS STEEL TO PRODUCE A LIGHTER WEIGHT, NON-CORROSIVE, AND LESS COSTLY HOUSING.

(7384) TITLE - COMPOSITE ENGINE GEARBOX

PROBLEM - CONVENTIONAL GEAR HOUSINGS CONSISTING OF MAGNESIUM EXHIBIT LOW MODULUS, LOW FATIGUE STRENGTH, AND SUSCEPTABILITY TO CORROSION.

SOLUTION - ESTABLISH A COST EFFECTIVE FILAMENT WINDING MANUFACTURING METHOD FOR A GRAPHITE FIBER/HIGH TEMPERATURE RESIN COMPOSITE HOUSING.

COMPONENT -- TURBINE BLADES

(7371) TITLE - INTEGRATED BLADE INSPECTION SYSTEM (IBIS)

1170 566

PROBLEM - INSPECTION OF TURBINE ENGINE BLADES AND VANES NECESSITATES HIGH ACCURACY. THE EFFORT IS TIME CONSUMING AND SUSCEPTABLE TO ERROR.

SOLUTION - THIS PROJECT WILL IMPROVE THE INFRARED, X-RAY, AND INFRARED THERMOGRAPHY INSPECTION MODULES BY INCREASING RELIABILITY, REPEATABILITY AND SENSITIVITY. ALSO, INSPECTION COSTS WILL BE REDUCED.

(7416) TITLE - ADVANCED TURBINE AIRFOIL CASTINGS

512 425 412

PROBLEM - TURBINE AIRFOILS ARE DESIGNED TO A STRESS RUPTURE LIMIT WHETHER COOLED OR UNCOOLED. THIS LIMIT IS LOW DUE TO EQUIAXED CAST SUPERALLOY MATERIALS CURRENTLY USED AND THEIR INHERENT GRAIN BOUNDARY LIMITATIONS.

SOLUTION - ADVANCED CASTING TECHNIQUES PERMITTING DIRECTIONALLY-ALIGNED GRAIN GROWTH ELIMINATE THE GRAIN BOUNDARIES PERPENDICULAR TO THE STRESSED DIRECTION WHICH INCREASES THE LONGITUDE STRENGTH, CREEP RESISTANCE, AND RUPTURE LIMITS.

(7471) TITLE - PROCESS CONTROL SYSTEM FOR N/C AND CNC MACHINES

(7417) TITLE - LOW COST DISKS BY CAP

PROBLEM - POWDER METAL DISKS FORM A SIGNIFICANT PART OF THE ENGINE COST DUE TO EXPENSIVE TOOLING/DIE REQUIREMENTS AND HIGH PRESSURE CONSOLIDATION EXPENSE.

SOLUTION - RECENT DEVELOPMENTS IN CONSOLIDATION BY ATMOSPHERIC PRESSURE HAS SHOWN THAT SUPERALLOY POWDERS CAN BE CONSOLIDATED TO 98 PERCENT DENSITY AT A REDUCED COST. LOWER COST GLASS DIES CAN ALSO BE USED WHICH REDUCES THE COST FURTHER.

(7453) TITLE - CERAMIC-FREE ATOMIZATION OF SUPERALLOY POWDER

PROBLEM - CERAMIC CONTENT IN SUPERALLOY POWDERS USED FOR TURBINE COMPONENTS LIMITS THE BENEFITS OF POWDER METALLURGY. GAS ATOMIZATION REPRESENTS A HIGH VOLUME, LOW COST APPROACH BUT IT HAS NOT PREVENTED CERAMIC ADDITIONS TO THE POWDER.

SOLUTION - THIS PROJECT WILL EVALUATE SUPERALLOY ATOMIZATION TECHNIQUES, DEMONSTRATE QUANTIFIABLE CERAMIC REDUCTIONS AND IMPROVE GAS TURBINE ENGINE COMPONENT COST AND MATERIAL PERFORMANCE.

COMPONENT -- TURBINE ROTORS

(7300) TITLE - IMPROVED LOW CYCLE FATIGUE CAST ROTORS

PROBLEM - INTEGRALLY CAST TURBINE ENGINE ROTORS HAVE BEEN SHOWN TO BE COST EFFECTIVE. HOWEVER, INVESTMENT CASTING RESULTS IN LARGE GRAIN SIZES IN THE DISK REGION AND THIS REDUCES FATIGUE LIFE COMPARED TO WROUGHT MATERIAL.

SOLUTION - DEFINE LASTING AND HEAT TREAT PARAMETERS, AND FINALIZE THE MANUFACTURING TECHNOLOGY FOR ESTABLISHING FINE-GRAINED CAST ROTOR PRODUCTION UTILIZING GRAIN-REFINEMENT TECHNIQUES.

(7480) TITLE - DUAL PROPERTY COMPRESSOR IMPELLER

PROBLEM - CENTRIFUGAL COMPRESSOR BLADES REQUIRE PROPERTIES WHICH CAN NOT BE ECONOMICALLY PRODUCED FROM A SINGLE MATERIAL.

US ARMY COMMUNICATIONS AND ELECTRONICS COMMAND
(CECOM)

The US Army Communications and Electronics Command (CECOM), headquartered at Fort Monmouth, NJ, is responsible for research, development and acquisition of communications, tactical data, and command and control systems for the Army. In addition to logistics, materiel management, engineering, maintenance engineering, and product assurance activities, the command organization includes three technical centers, seven project managers, and one program manager. The three technical centers include the Center for Tactical Computer Systems (CENTACS), the Center for Communications Systems (CENCOMS), and the Center for Systems Engineering and Integration (CENSEI). The seven Project Managers include those for the Position Location Reporting System/Tactical Information Distribution System (PLRS/TIDS); the Field Artillery Tactical Data Systems (FATDS); the Operations Tactical Data Systems (OPTADS); the Satellite Communications (SATCOMA); the Single Channel Ground & Airborne Radio System (SINGARS); the Multi-Service Communications Systems (MSCS) and the Army Tactical Communications Systems (ATACS). The Program Manager identified above is for Test, Measurement, and Diagnostic Equipment (TMDE).

CECOM's planned projects cover a variety of electronics problems with special emphasis on computer applications and circuit technology. Projects support efficient manufacturing of custom components for use in future tactical radios.

Three projects proposed for FY 85-88 funding will develop advanced methods for production of detector materials and components needed for night vision devices. Currently, infrared detectors are produced on a small scale under laboratory conditions. Unit costs are high and repeatability is low. One near term project deals with scaling up the distillation of tellurium, a raw material for mercury-cadmium-telluride (HgCdTe) detectors. A critical measurement for determining the quality of HgCdTe wafers involves a time consuming manual procedure. For FY 88, a project that will apply automated scanning techniques for high resolution inspection of the wafer is planned. Another FY 88 project will use chemical vapor deposition techniques to apply HgCdTe onto gallium arsenide wafers.

Additional program funding largely anticipates micro-electronics as the driving force in componentry and built-in test capability for command, control, and communications systems. Computer-dominated methodologies are inherent in such areas as design, manufacture, and manufacturing documentation for communications systems and are expected to be of particular value for the short lead time, low volume production anticipated for future equipment and systems.

PROBLEM - FABRICATION OF LITHIUM METAL IS A VERY LABOR INTENSIVE, DIFFICULT PROCESS. A DRY ROOM WITH ONLY 2 PCT RELATIVE HUMIDITY IS REQUIRED. ALSO, LITHIUM HAS POOR TENSILE STRENGTH AND IT HAS GREAT AFFINITY TO OTHER METALS AS WELL AS MOST PLASTICS.

SOLUTION - ESTABLISH AN AUTOMATED PRODUCTION LINE FOR THE PRODUCTION OF LITHIUM AND LITHIUM DEVICES. SINCE CURRENT DOMESTIC CAPACITY FOR THESE ITEMS NOW MEETS ONLY 10 PCT OF MOBILIZATION REQUIREMENTS, THE LINE SHOULD PERMIT MUCH HIGHER PRODUCTION RATES.

US ARMY DEPOT SYSTEM COMMAND

(DESCOM)

The US Army Depot System Command (DESCOM), with headquarters at Letterkenny Army Depot, Chambersburg, Pennsylvania, commands and controls the twelve depots and seven depot activities in the United States and West Germany which comprise the US Army Depot System. Activated in September 1976, this command employs over 37,500 civilians and nearly 1,400 military personnel and manages an annual budget in excess of \$1.5 billion.

DESCOM is a major interface with the soldier in the field. The depots store and ship a broad range of general supplies and munitions managed by the Army Defense Logistics Agency, and other agencies, to US and allied units worldwide. Half of DESCOM's personnel and three-quarters of its budget are dedicated to depot-level maintenance on most of the equipment in the Army's inventory. DESCOM is striving to improve the productivity of its work force through innovative management techniques and through the acquisition of modern capital equipment, such as industrial robots.

DESCOM's planned projects span repair and overhaul operations for tracked/wheeled vehicles, communications systems, and aircraft.

The vehicle and aircraft related projects include robotics applications which will reduce personnel exposure to hazardous cleaning and refinishing operations, and will improve repair procedures which are time consuming or labor intensive. Significant efforts are directed to the overhaul of track pads and road wheels. These include automated systems for the injection molding and curing processes for replacement pads and wheels. Engine overhaul operations will be improved by projects that will automate disassembly, inspection, machining, and reassembly.

In the communications/electronics area, DESCOM will conduct a project to refinish electronics shelters.

US ARMY ELECTRONICS RESEARCH AND DEVELOPMENT COMMAND

(ERADCOM)

The Army Electronics Research and Development Command in Adelphi, Maryland develops a broad range of electronics and electro-optical equipment. ERADCOM maintains programs in such areas as high performance optical systems which enable soldiers to see deep into the battlefield day or night, in any kind of weather, and through any type of obscurant. Some ERADCOM products can neutralize the enemy's electronic warfare efforts, while others make our weapons less vulnerable to enemy sensors. The command also specializes in electronic fuzes, radars and radar detection systems, electronic surveillance devices, meteorological equipment, thermal imaging devices and lasers.

Seven laboratories are integrated into ERADCOM's structure. These laboratories are product oriented and as a result can identify major problem areas where applied MMT efforts can provide important benefits. Although ERADCOM and its laboratories identify and manage projects, the bulk of the actual work is contracted out to industry.

In the category of integrated electronics, ERADCOM will pursue the establishment of various technologies for Very High Speed Integrated Circuits (VHSIC). These projects include a tape automated bonding process that is compatible with VHSIC chips; a process to improve the productivity for ceramic packages; improved processes for grid array and perimeter chip carriers; and, in-process screening and quality control methods.

Another major area of interest is the Common Module detector components which are used in night vision systems for the TOW and DRAGON missiles, night observation devices and thermal sights and viewers for tanks, helicopters and fighting vehicles. A project is underway to eliminate the hand fabrication of up to 1000 gold wire bond connections in each detector and to demonstrate the use of non-glass materials in the manufacture of the dewar structure. Another project is establishing techniques for growing a thin epitaxial film of mercury-cadmium-telluride (HgCdTe) onto CdZnTe wafers. A planned project will improve production methods in order to maintain critical dimensions in the miniature linear drive motor that powers the cryogenic cooler. Other planned projects will address the high rate production of thermoelectrically-cooled (Peltier effect) detectors which operate at 3-5 micron wavelengths.

US ARMY MATERIALS AND MECHANICS RESEARCH CENTER

(AMMRC)

The Army Materials and Mechanics Research Center (AMMRC) is designated the AMC lead laboratory for Materials Testing Technology. In this role, AMMRC is responsible for management and direction of the AMC materials testing technology activities and formulation of the Materials Testing Technology (MTT) Program. This program formulation is accomplished by identifying and defining materials testing problem areas in response to system requirements of the AMC major subordinate commands project managers. The lead laboratory mission also encompasses the advising and assisting of the major subordinate commands and project managers in the utilization of MTT in order to assure a smooth transition from the developmental to the production phases of the life cycle. Specific areas of effort are as follows:

a. Automated Testing

One of the primary needs in NDT and in inspection in general is to remove the decision-making from the inspector where possible. Efforts will be intensively directed toward providing engineering prototype systems utilizing automated decision-making. These include automated radiographic and ultrasonic techniques, optical/laser techniques, and computerized chemical analysis. The ultimate goal in all automated testing systems is the essential feedback to the total system for automated process control.

b. Predictive Failure

The need for diagnostic measurement techniques for anticipation of catastrophic failure and for the measurement of remaining life, both in operating equipment and in units being overhauled and rebuilt, presents a tremendous opportunity for cost savings and reliability improvement. A principal thrust has come from the loss of diagnostics and in-situ measurements adjunct to non-destructive testing represents the real time use of NDT techniques with analysis and decision elements built in.

c. Materials

As the newer materials are utilized in major weapon systems, improved inspection techniques must be made available to assure adequate and reliable performance. Of particular interest in the next five years are composites, elastomers, plastics, and ceramics, with continuing interest in metals and energetics (explosives, pyrotechnics, and propellants).

d. Techniques

Specifically covered in the objectives of the MTT Program is the investigation of specific physical principles which can potentially offer significant improvement in sensitivity, cost, portability, or speed, and combination of these. The development and application of techniques, such as ultrasonics, infrared, holography, spectroscopy, chromatography, etc, can significantly improve AMC materiel and offer substantial improvement in process control.

The MTT Program includes the testing of electronic materials and devices under one of four broad test method categories: nondestructive, chemical, mechanical, or electronics. The recently established "electronics" category emphasizes the importance of quality assurance inspection procedures for devices which are often used in mission critical applications.

US ARMY MISSILE COMMAND

(MICOM)

The US Army Missile Command is located at Redstone Arsenal, AL, and is responsible for research, development, and acquisition of missile systems for the Army. Facilities include flight test ranges, laboratories, and a simulation center.

Major systems managed by special project offices include STINGER (Shoulder-Fired Air Defense Guided Missile), MLRS (Multiple Launched Rocket System), HELLFIRE (Helicopter-Carried Air-To-Ground Missile), PERSHING (Extended Range Ground-To-Ground Missile) and the 2.75 Inch Air-To-Ground Rocket. MICOM is also the Army's center for laser research and manages efforts to apply lasers in missile guidance and as weapons.

MICOM supports technological thrusts in the following electronics areas: (1) Manufacturing techniques for multiple chips employing multiple technologies that are projected to be in the mainstream of the semiconductor marketplace for many years to come. (2) Electronic computer-aided manufacturing and hybrid computer-aided design and manufacturing in order to automate microelectronic production lines and therefore improve productivity, increase fabrication speed and decrease unit cost.

The missile guidance system is a major area of effort for MICOM's MMT Program. Several projects are being applied to integrated circuits and seekers. They cover laser soldering of surface mounted devices, semiadditive fine-line electroless copper plating, an automatic hermetic sealing system for hybrid circuit assemblies, methods for producing millimeter wave receivers, growth of detector grade cadmium sulfide crystals and volume methods for 128 x 128 staring focal plane arrays. Several other guidance system projects are being planned. These deal with the fabrication of optical systems and radomes.

Propulsion system components such as motor cases, nozzles, and propellants are the subjects of several manufacturing technologies efforts. Work is underway on production processes for fabricating composite motor cases with integral pole pieces and attachments. Other projects cover a winding/cocuring process for large motor case insulators and the replacement of asbestos in insulator formulations.

Proposals in the area of test equipment include work on electrical components where efforts cover screening of chips and validation for semiconductor devices.

US ARMY TANK-AUTOMOTIVE COMMAND

(TACOM)

The US Army Tank and Automotive Command is located in Warren, MI, and has the mission of developing, acquiring, and fielding tracked and wheeled military combat, tactical, and general purpose vehicles. The mission is worldwide in scope and includes among its customers all of the US military services, and friendly foreign nations. The production base for mission items is made up of both private and government-owned contractor-operated facilities. MMT efforts are accomplished partially in-house and partially out-of-house.

The main requirements for the production of armored structures are to increase their tolerance to ballistic threats while reducing overall weight. Effective firepower is essential; but, the survivability of modern combat vehicles also depends upon protection and agility. Two predominant types of armor are used in the latest combat vehicles. In tanks, hulls and turrets are complex, laminated structures consisting of steel plates and fiberglass panels. In other combat vehicles, these items are more conventional weldments which consist of thick aluminum plates. Armor fabrication requires a great deal of manual labor for plate cutting, joint preparation, multi-pass welding, weld repair and stress relief. In response to these problems, TACOM will use MT projects to establish: automated records handling systems for welding procedures and process planning documents; weld monitoring systems to detect defect producing conditions; a plasma-arc plate cutting facility with numerical controls; high deposition welding techniques for steel and aluminum; and, advanced NDT inspection systems. To take full advantage of new developments in combination type and ceramic type armors, it will also be necessary to develop practices for economical production. TACOM will sponsor projects covering deformation cycles, fabrication procedures and attachment methods for these materials.

Another major requirement is to develop production techniques for drive systems for the M1 Tank and other vehicles. The AGT 1500 gas turbine will be the subject for several efforts that will bring down production costs. Two projects cover scaled-up techniques for applying erosion and thermal coatings to internal components. Another project will provide a computer controlled balancing system for the impeller/rotor. This system will, in real time, remove precise amounts of material with a laser. The Army is developing an efficient diesel engine for tactical vehicles. This "adiabatic" engine does not have a cooling system and operates at temperatures which would char engine oils including those with synthetic bases. As a result, lubricating fluids are not used. Engine components which are subjected to thermal shock, high dynamic loads and friction are made from advanced ceramic materials. MT work is being directed to producing consistently high quality silicon nitride and silicon carbide components.

In the area of track and suspension, the goals are to introduce production techniques for more advanced systems that meet demands for higher performance over brutally adverse terrain. It is a challenge to keep production costs down and to build in high reliability. Lightweight casting and surface hardening investigations are being fostered by these requirements.

US ARMY TEST AND EVALUATION COMMAND

(TECOM)

TECOM, with headquarters at Aberdeen Proving Ground, MD, is the primary developmental testing agency for the US Army. TECOM plans, conducts, and reports on development tests performed during the life cycle of Army materiel, and evaluates foreign materiel for possible US acquisition. Additional testing is performed as a service to the commodity commands upon their request. The testing organization consists of the aircraft development test activity, three environmental testing activities, five proving grounds (one of which serves as the third environmental activity), and a national missile range. Facilities are located in the continental United States, the Panama Canal Zone and Alaska.

Individual investigations into production test procedures and evaluation techniques are accomplished through TECOM's MMT program. In view of TECOM's mission and the intended results of the MMT efforts (to improve test procedures), the majority of the work is accomplished in-house.

TECOM's MMT efforts are grouped under two general headings: documentation and resource conservation. Individual efforts are funded from these "parent programs." Current funding constrains TECOM to an annual program that supports approximately one-half of their planned efforts.

US ARMY TROOP SUPPORT COMMAND

(TROSCOM)

The US Army Troop Support Command (TROSCOM), located in St. Louis, Missouri has a diverse mission to improve the Army's combat readiness. The scope of their work ranges from amphibious transportation and watercraft to field support items such as rations, clothing, generators, bridges, camouflage, mine detectors, air conditioners, water purifiers, heaters, fuel storage and distribution equipment, compasses, earthmoving equipment, body armor, and parachutes.

The Belvoir Research and Development Center (BRDC) located at Ft. Belvoir, Virginia is a subordinate element of TROSCOM. All of the planned projects in this year's TROSCOM plan originated at BRDC. Major problem areas confronting BRDC include:

a. Providing military bridges at moderate cost, which have high mobility and high emplacement speeds while retaining the ability to withstand the abusive treatment inherent in the battlefield environment. High strength, low density composite materials offer great promise for solutions to this problem. Increased production of high strength fiber materials has reduced materials cost. Techniques for the fabrication and installation of these materials into usable bridge components is the area in which large cost reductions are possible. The reduction of presently used labor intensive methods, through the application of automated processes, will reduce component costs. Initial design in these materials offer improved performance due to the flexibility possible in material configuration.

b. Combat vehicle deperming. Armored vehicles have a magnetic signature which is induced by various manufacturing operations. This signature makes them vulnerable to magnetic influence land mines. Several nations, including the USA, have mines fused in this manner. By exploiting and implementing the knowledge gained by our NATO Allies and the US Navy, a production facility for removing the magnetic signature will be designed and fabricated.
